1. PROGRAMME STRATEGY: MAIN DEVELOPMENT CHALLENGES AND POLICY RESPONSES

Reference: Article 17(3)(a)(i)-(vii) and 17(3)(b)

Text field [30 000] – (Total characters contained:)

The Education Programme 2021-2027 is one of the main tools for the implementation of Priority 1 "Education and Skills" of the National Development Programme Bulgaria 2030 (NDP 2030), as well as the strategic goals set in the Strategic Framework for Development of Education and Training in the Republic of Bulgaria (2021-2030) and the Strategy for

¹ Numbers in square brackets refer to number of characters.

Development of Higher Education in the Republic of Bulgaria for the period 2021-2030. A basis for innovative and smart development of Bulgaria is the provision of **quality and inclusive education for all**, proactively aimed at evolving **labour market** trends, with a view to enhancing the **quality of skills** and the formation of highly educated, innovative and active individuals capable of being successful as professionals and citizens and thus contributing to their personal well-being, development of society and the sustainable development of all social fields.

The COVID-19 pandemic has changed the way school students are taught. COVID-19 has become a catalyst for educational institutions to seek innovative solutions in a relatively short period of time and has shown the importance of digitizing education and ensuring equal access to technological resources for all school students. In this context, the programme will support national efforts to bridge the digital gap of school students and ensure quality education.

Main challenges in the education sector, identified by stages and levels of education:

Pre-school and school education

The EC Report on Bulgaria 2019 in the framework of the European Semester (EC Report on Bulgaria 2019) calls on Bulgaria **to improve the quality, labour market relevance and inclusiveness of education** and training, in particular for Roma and other disadvantaged groups.

The report points out that significant labour force and skills shortages point to the need to **invest more in training and re-qualification**, aligning education with the needs of the labour market. The persistently high level of early school leaving and low educational outcomes underline the need for significant investment, **especially in early childhood education, school and vocational education and training**.

The UN Sustainable Development Goals, and in particular Objective 4 “Quality Education”, indicate that a key priority should be to **ensure inclusive and equitable quality education** and to stimulate **lifelong learning** opportunities for all. In this regard, the findings for Bulgaria are that there is still inadequate education system that does not meet the current requirements: **outdated curricula based on unification and needs from the time of the industrial revolution**, not taking into account the dynamics of the emergence of new professions and specialties, low uptake of non-formal learning opportunities, **a one-size-fits-all approach, non-recognition of the specifics of each child** — every child is a special, undeveloped system of inclusive education for children with special educational needs and minorities, **insufficient level of integration of educational institutions in the market economy**, late career orientation. It is also pointed out that there is a misunderstanding of the term ‘equitable’ — **there is no distinction between equal opportunities and equal/equitable education for all**, regardless of the abilities and the social and educational background and family status of parents, and that young people choose the most attractive or easy specialty, rather than choosing professions according to their personal achievements and interests and employability. According to the findings in Bulgaria, there are unrealistic expectations for the large and independent role of the education system in forming education, values and culture.

Given the country’s negative demographic trends, the level of educational characteristics of the population is a key prerequisite for the quality of human resources. *The EC Report on Bulgaria 2019* states that Bulgaria has invested insufficient resources in pre-school and

primary education, which are crucial to laying the foundations for equal opportunities. In 2016, expenditures for these levels of education amounted to only 0.7 % of GDP, less than half the EU average of 1.5 %. In general, expenditures on education as a percentage of GDP is among the lowest in the EU (3.4 % vs 4.7 %). However, the Education and Training Monitor 2019 Bulgaria Report states that in 2017 the total budget expenditures in Bulgaria for education increased by 8% in real terms compared to the previous year, amounting to 3, 6% of GDP.

The analysis of the socio-economic development of Bulgaria 2007-2017 for the definition of the national priorities for the period 2021-2027, adopted by virtue of Decision No 196/11.04.2019 of the Council of Ministers of the Republic of Bulgaria, shows the worrying trend, in the last five years, of constantly reducing the scope of pre-school education. The group **net enrollment rate** for children aged 3-6 is decreasing steadily from the highest figure reached in 2013 (83.6 %) and reaches **78.4 % for the 2018-2019 academic year**. There is a negative trend despite recent reforms in the field, which make pre-school education compulsory for all children between the ages of 5 and 6. The explanation could partly be sought in the **unregistered external migration of children** in compulsory pre-school and school age, as well as the inability of the most vulnerable groups to secure the inclusion of their children in early childhood programmes on **purely financial grounds**, due to the fees and hidden costs. Among the likely causes is the limitation of children's physical access linked, on the one hand, to the **closure of kindergartens in small and remote areas, as well as to the scarcity of places in kindergartens in big cities**, as a result of their population concentration. The number of kindergartens in the country decreased by 11.4 % over the last five years, **with 283 closed kindergartens in small and medium-sized municipalities and 47 new kindergartens were opened** (24 in Sofia City).

Only the South-Western region, due to the influence of the capital, notes a net increase (+ 3.4 %) in the number of kindergartens in the period, while the opposite is the North-Central Region (-22 %). However, the number of places in kindergartens is still insufficient. To reduce the effect of this negative trend, Decree No. 181 of the Council of Ministers of 31.07.2020 approved an additional transfer of BGN 50,000,000 under the budget of the Sofia Municipality for 2020 for construction, furnishing and equipment of kindergartens and nurseries. Also, one of the three pillars of the Recovery and Resilience Facility in the Next Generation EU Mechanism for Recovery and Sustainability for the period 2021-2024 provides support for sustainable resource management in kindergartens and schools, energy efficiency, recycling and waste reduction through a project aimed at implementing Recommendation 3 of the Council Specific Recommendations addressed to Bulgaria in the framework of the 2020 European Semester to focus investment in the field of green and digital transition, This type of activities will also have an impact to implement the recommendations to Bulgaria to increase the inclusive nature of education and training.

Participation in early childhood education is crucial, especially for children with low socio-economic status and those, who speak different language from Bulgarian language in home environment. EU Fundamental Rights Agency's survey shows that **only 66 % of Roma children in 4-6 years visit a kindergarten in 2016**. The results of PISA 2012 for Bulgaria show that participation in at least two years of pre-school education before entering school increases the mathematical results in PISA with an average of 7, reaching 10 for children with lower socio-economic status and 19 points for children speaking other language than Bulgarian in home environment. Despite this negative result, there is also a positive change. Within the project "Active inclusion in the system of pre-school education" under the

Operational Programme "Science and Education for Smart Growth" 2014-2020 (OPSESG) support is provided for 1,500 kindergartens and 50,000 children mainly from marginalized groups, incl. Roma.

Therefore Bulgaria has made significant efforts to ensure access to education for every child and school student with a change in regulations. With the adopted Pre-school and School Education Act (PSEA) measures have been taken to change the negative trend, as it regulates compulsory preschool education for all children aged between 5 and 6 years of age. Also, with the adoption of the Ordinance on Inclusive Education, efforts are concentrated in ensuring access to quality and modernized education for every child and student, reducing the share of early school leavers and early childhood care. The principles of inclusive education, enshrined in the ordinance, are an integral part of the right to education and are implemented in accordance with the principles in Art. 3, para. 2 of the PSEA. The Mechanism for joint work of the institutions for coverage and inclusion in the educational system of children and school students of compulsory school age adopted by the Council of Ministers Decree No. 100/08.06.2018 also has a significant impact as in the period from 2017 to April 15, 2020, the coverage teams returned back to school and kindergarten or enrolled for the first time 51,460 children. This is eloquent proof that it is necessary to expand and upgrade the activities of the Mechanism in the next programming period. The coefficient of the covered in 2020 marks an increase by 3.73 compared to 2019 and by 3.62 compared to the beginning of the previous school year.

The *Analysis of the socio-economic development of Bulgaria 2007-2017* also outlines other significant negative trends, such as: the group net enrolment rate of grade I to IV pupils has been steadily decreasing in the last 10 years and over, with **each tenth child not covered** by (otherwise compulsory) primary education in the 2017-2018 school year. Even lower is the scope of **lower secondary and secondary education, reaching 82.6% in the 2017-2018 academic year**, or 17.4% of children in school age are not covered/dropped out of **lower secondary and secondary education**. The demographic challenges and reforms underway in the field of education have led to the closure of more than 1 000 schools since the beginning of the century. The number of pupils during the same period fell by just over 1/3 or around 300 people. **The closure of educational institutions**, especially in small towns, together with other factors such as **social and family reasons**, negative attitudes to education and lack of motivation, learning difficulties in mastering the school subjects, etc., reflects also on a significant proportion of early leavers from education and training. In 2017, for the first time since 2013, the value of the indicator marked a positive change, decreasing to 12.7% or 1.1 percentage points compared to 2016. This is due to both effective policies from previous years to reduce dropping out of school, as well as effective current policies implemented in order to include in forms of education and training those who have not completed secondary education.

According to the *2019 EC Report for Bulgaria*, despite recent improvements, the percentage of early school leavers (ESL) remains high - 12.7%. It is estimated to **be significantly above the national average among Roma (67 %), in rural areas (27.9 %) and in the North-Western (21.6 %) and South-Eastern (22 %) regions**.

The concentration of disadvantaged school students in schools with low performance is relatively high in Bulgaria, driving further the skills gap. Several international surveys confirm that socio-economic status has a significant impact on school students' performance. **According to the estimations 60 % of Roma pupils study in Roma-majority or Roma-**

only schools (FRA, 2016). The duration of the child being included in pre-school education, the educational status of parents and language, spoken in the family are indicated as the most significant factors for educational outcomes. The longer the child has visited pre-school education, the better their educational outcomes are at school. Children who grow up in a low educated parents' environment, and when the language spoken by the family is not Bulgarian, mostly drop out of school. Despite a change in the funding model for kindergartens and schools with concentrated children from vulnerable groups and other measures taken for inclusive education of children and pupils from vulnerable groups, the promotion of ethnic joint schools and desegregation measures remains a challenge. Further investment could help to offset this phenomenon.

The EC Report on Bulgaria 2019 also states that, in 2016, the level of poverty and social exclusion among people with disabilities was 55.9 %, i.e. 18.4 percentage points higher than for people without disabilities. More than half of people with disabilities drop out of education early and only 34 % have jobs. Their tertiary education attainment rate – 13.5 %, is also very low. Social transfers have a low impact on poverty reduction. Major challenges for the education and training system remain, including **providing quality inclusive education and tackling early school leaving**.

According to Eurostat data for 2019, the value of the share of ESL is 13.9%, which is well above the level of 12.7% in 2018 and 2017, i.e. no progress is made in 2018. The highest values of the ESL rate in 2018 were observed in the North-Western Region — 19 % and in the South-Eastern — 22.6 % (these two regions have the highest values of this share for the whole period 2013-2018).

However, significant progress has been made in the area of pre-school and school education: over 2,664 children with special educational needs have received specialized support from psychologists, pedagogues, therapists and others under the project "Support for equal access and personal development" under OPSESG. Within the framework of the same project in 34 kindergartens are trained both children with special educational needs and children at risk of learning difficulties, with which prevention measures are implemented in order to fully integrate them into the educational system.

In support of the reforms in the education system launched with the adoption of the Pre-school and School Education Act in the programming period 2014-2020, 191,520 Roma participants are included in activities under Priority Axes 2 and 3 of OPSESG, and they are supported by procedures aimed at to all areas of pre-school and school education and higher education.

The most significant impact on the representatives of socially vulnerable groups was exerted under the project "Development of school students' abilities and increase their motivation to learn through activities that develop specific knowledge, skills and competencies (Your class)" under OPSESG – 451,498 students, as of these, 105,660 Roma school students from over 2,300 schools across the country are involved in extracurricular activities of interest and in activities to overcome learning difficulties in order to increase their motivation to learn and develop their skills. This largest project within OPSESG has contributed in the long run to reducing the proportion of early school leavers. To a large extent, the increase in the share of ESL in 2019 compared to 2018 coincides with the period of completion of the activities of the project "Your class". In continuation of the good practices under the "Support for Success" procedure within the OPSESG, it is planned to cover 120,000 school students with learning difficulties and at risk of leaving the education system. The achievements in the

programming period 2014-2020 create a prerequisite for continuing and upgrading the results achieved in the next programming period.

The share of school dropouts in large cities in Bulgaria is **3.9 % and almost 2.5 times lower than the EU average (9.7 %)**, while the value of the **indicator in rural regions of Bulgaria reaches 27.9 % while it is 10.9 % on average in the EU**. A survey by the EU Agency for Fundamental Rights shows that **7% of Roma do not attend any level of education, and about 45% of Roma do not complete secondary education**. Although the problem of leaving education and training is addressed with targeted interventions during the period considered, including a special focus on vulnerable groups, where the problem is particularly acute, the evolution of the indicator value and its still high level indicates a need to refine the measures taken and/or to expand their scope.

In recent years there has been a steady trend towards improving the population's educational structure, with an increase in the share of tertiary graduates and a reduction in the number of people with primary and lower education, but the country is still lagging behind the EU average. In **2018, 28.2% of the population had a tertiary level of education (31.4 % in the EU)** and the relative share of the population with basic and lower education reached 17.4 %. According to the latest national census, the **relative share of the population in the villages with at least secondary education (40.1 %) is almost twice as lower than the value of the indicator in the towns and cities**. The educational structure of the Roma and the Turkish ethnic communities is a reason for concern, with 93 % and 70 % respectively of the representatives of these ethnic groups not completing their secondary education, compared to about 30 % for ethnic Bulgarians, according to the 2011 census data. Every fourth Roma child and every ninth Turkish child aged 7-15 have never attended school, compared with 5.6 % of children in the Bulgarian ethnic group. Despite the improvement of the educational structure of the population, there are still worrying signs of the quality of education. In the *Global Competitiveness Report 2017-2018 study of the Global Economic Forum* Bulgaria is ranked 83 in the world (and 26 in the EU, surpassing only Hungary and Croatia) according to the quality of the education system. In addition in the last ten years, the country has declined 19 positions down. **Between 2001 and 2011, Bulgaria falls from the 4th to 22nd place in the International Reading Skills Survey of the 4th grade school students PIRLS**, and is between only the four countries showing a net decrease in results in the decade. Although the performance of Bulgarian school students is improving in the last survey in 2016, when the country moves up to the 14th place, the achievements of the beginning of the century cannot yet be reached. Similar trends are also observed in the presentation of the country in the International Study "Trends in International Mathematics and Science Study", **TIMSS**. The average mathematical result of the Bulgarian school students notes a sharp decrease in the period 1999-2007, partly compensated in the latest edition of the survey (2015). The results of the Organisation for Economic Cooperation and Development (OECD) Programme for International Student Assessment (**PISA**) survey conducted in 2018 show **that 47 % of 15-year-olds are functionally illiterate, 46.5 % are with achievements below the critical threshold in the field of science and 44.4 % are under-skilled in mathematics, and the gap compared to the EU is more than double in all areas of the survey**. Moreover, **the achievements of Roma school students and Turkish ethnic backgrounds shows a significant gap with ethnic Bulgarians equal to 3 education years in terms of reading and 2 years in terms of mathematics and sciences**.

In the *2019 Education and Training Monitoring*, the EC indicates that the workforce in the education sector is ageing, which generates a shortage of teachers. **Almost half of the**

teachers are over the age of 50 and are likely to reach the retirement age within the next 10 years; **10% are already older than 60**. A shortage is emerging and it is expected to deepen. **This is especially true for kindergarten and primary school teachers, teachers of foreign languages, information and communication technologies (ICT), mathematics, physics and some subjects in the field of vocational education and training (VET)**. The specific need of replacement by subject and educational level is not known, since only recently (with the support of the EU) in Bulgaria has started the creation of an instrument for predictions regarding the teaching profession. However, even in a declining number of pupils, an acute need to replace large groups of retiring teachers is expected to arise. In addition, **the number of professionals in charge (such as resource teachers, school psychologists, speech therapists, etc.) is also insufficient**, and with the progress of the reform in the field of inclusive education the unsatisfied demand is expected to increase. It is necessary to take into account the fact that under OPSESG under the procedure "Qualification of pedagogical specialists" training is provided for 4,000 pedagogical specialists under the age of 34, for 30,000 pedagogical specialists aged between 35 and 54 and for 5,000 pedagogical specialists involved in training for the application of modern assessment methods. Also under the projects "Student Scholarships - Phase 1" and "Student Internships - Phase 1" and "Student Internships - 2", implemented under OPSESG, 14,590 students in the field of higher education "pedagogical sciences" were supported. The implementation of the policy for sustainable increase of the incomes of the pedagogical specialists also continues. In 2020, the amount of the minimum basic salary has been increased by about 65% compared to the beginning of the mandate of the government (the relevant changes have been made in Ordinance No. 4 on rationing and remuneration of labor promulgated SG, No. 34 of 2017, SG, No. 7 of 24.01.2020).

A serious problem characterising human resources in the country is the **low level of computer and digital skills**, which hinders the widespread use of ICT and their own services and the achievement of digital growth. Bulgaria continues to lag behind the EU average. According to the Digital Economy and Society Index **DESI in 2017 only 29 % of the population has at least basic digital skills (57 % EU average)**, ranking the country 27th in the EU. **Only 75.1% of the population aged 16-74 use the Internet, compared to the EU average of 87%**. According to the Teaching and Learning International Survey 2018 (TALIS), 44% of Bulgarian secondary education teachers report that they use ICT in most or every lesson, which is slightly below the EU average - 47%. At the same time, Bulgarian teachers have less confidence in their digital skills than the EU average. The need for training on how to integrate IT technologies in teaching became apparent during the transition to the distance form of the educational process due to COVID-19, as two thirds of teachers in a study reported that they had no prior training to work with educational platforms or distance learning (*European Education Area Progress Report 2020*). Interventions at all levels of the education system, as well as of the system of qualification and re-qualification of employed, unemployed, disadvantaged people and disadvantaged groups, are necessary to enhance citizens' digital literacy and to avoid so-called digital exclusion. Given the state of emergency in the country, all schools have introduced distance learning in an electronic environment through cloud platforms or other means of interaction. Under the project of OPSESG "Education for Tomorrow" in 461 schools in the country were purchased and delivered a total of 1,986 laptops, 500 Internet access devices with 500 prepaid internet packages for teachers, which were credited as assets to schools with less financial means, and thanks to which the teachers in them were able to adapt the learning process to the new reality.

In this regard, the additional funds from the REACT-EU Rehabilitation Assistance for Cohesion and Territories of Europe, which will be implemented by amending Regulation (EU) 1303/2013, will be used to support the building of a school STEM environment. ESF support will help build comprehensive integrated solutions for a new school creative environment with a focus on science, engineering, mathematics and technology (STEM), as well as fully prepare teachers and school students for effective distance learning in electronic environment especially for school students from vulnerable groups and those with special educational needs.

The *2020 EC Report on Bulgaria* states that despite the measures taken in Bulgaria, participation in adult education remains among the weakest in the EU. In 2018, participation in adult learning was at a low level of 2.5%, which is significantly below the EU average of 11.1%. It is important to note that the share of low-skilled adults in adult education is about a quarter of the total population. The quality of adult education provided and the limited capacity for effective quality monitoring are an obstacle to more effective adult participation in the learning process.

It is necessary to take into account that progress has been made, as at present under the project "Adult Literacy - Phase 1" under OPSESG two training stages with adult literacy courses (persons over 16 years of age) have been conducted and completed by 5,503 persons. From November 2018, the third training stage for conducting literacy courses and courses for mastering the curriculum from the lower secondary stage of primary education has started. Approximately 3,500 people are expected to be trained in the third stage. It is necessary to continue working with the target groups to complete a level of education and focus on a higher level of education and better realization on the labor market.

In recent years, attempts have been made to integrate modern technology into the learning process, but the experience is contradictory. For example, from the 2018-2019 school year, e-textbooks are available to first to seventh grade school students, but the e-textbooks themselves are scanned copies of the paper ones and are free. At the same time, the electronically readable versions of the textbooks, which in addition to the teaching material have included interactive games and exercises, remain paid, with all the resulting negative consequences in terms of equal access to quality education. In 2019, a major ESF funded project on the introduction of digital education in a school started — “**Education for tomorrow**” under the OPSESG, which aims at creating a single cloud environment in the education process with an implemented platform for educational services and content, the creation of digital educational content and the upskilling of teachers and pupils for its use. It is planned to upgrade the project "Education for Tomorrow" by upgrading the cloud environment created by the project, developing algorithms for preparing analyses of student outcomes, personalization of student learning, etc., which will be done through complementarity between the Programme Education and the Recovery and Resilience Facility of the Next Generation EU Recovery and Sustainability Mechanism.

Although measures have been taken in recent years to modernise the education system (such as the successive inclusion of information technology training into pupils' curricula in the first, fifth and seventh grades), there are still no concrete results in the overall performance of the country, which calls for a thorough critical analysis of the effectiveness of the reform undertaken, with a focus on its results.

According to the *EC Report on Bulgaria 2019*, the introduction of a revised curriculum focusing on digital skills is underway. However, available data show that there are **still**

significant gaps in the acquisition of basic and digital skills and knowledge of the Bulgarian language. These circumstances call for additional investments and policy measures in improving basic and digital skills. With the support of the ESF, career guidance centers have been set up, but the provision of career guidance and individual approaches to each student needs to be strengthened.

Vocational education

Social and economic analysis data on NUTS Level 2 regions² show that vocational education and training (VET) in the school year 2019/2020 takes place in 21 art schools, 25 sport schools, 358 vocational and 23 vocational colleges with post-secondary education. The total number of schools is 427 and the total number of school students in them is 135 117. In comparison with the school year 2014/2015, vocational schools have fallen by 51, with at the most a reduction in the vocational secondary schools. In 2019, secondary education in the arts, sports and vocational schools with a diploma graduated 21,588 people. Vocational secondary schools are mainly located in the regional centres and in larger municipalities, where the higher number of pupils is concentrated.

The number of trainees in vocational education and training is higher than that of learners in the general education system. In 2017, VET learners are 117 130 learners, which represents 51.7 % of the total number of school students in the secondary education system. But this is a decrease compared to 52.5 % in 2012.³

According to a World Bank report, girls are less likely to enroll in VET and their share has been declining in recent years. In the school year 2018/19, 37.2% of VET students were girls. A *CEDEFOP* report states that there are also gender differences in programme choices, noting that boys prefer programmes related to computer systems and coding (the most popular options), transportation, agriculture, economics, construction, and girls enroll more often in economic and administrative programmes (the most popular options), services (tourism, hotels and restaurants), as well as design and clothing.

The NDP 2030 states that the **trend of a decrease in the relative share of VET learners, although still higher than the EU average, continues. Every fourth school student in the last grade in vocational schools does not complete secondary education at the ordinary or corrective session of the national university examinations, as well as each second school student, studied in programmes to acquire the second degree of professional qualification. One out of three school students graduate without the acquired professional qualification and the employment rate of recent VET graduates (64.2 %) is 10.8 percentage points below the EU average.**

The analysis of the effectiveness of the current state of the VET system, prepared within the project BG051PO001-3.2.03 "Management for effective vocational education" of the Ministry of Education and Science under OPHRD 2007-2013, shows that vocational education is unequal with the education received in general education and specialized high schools in terms of several key factors and in general it is less and less prestigious and more and more difficult to complete. Nevertheless, actions have been taken to change the negative trend, as under the project "Student Internships – Phase 1" of OPSESG nearly 8,351 school students from vocational schools in the country have undergone practical training in a real

² See: <httpswww.eufunds.bg/bg/oprd/node/2816>

³ According to Cedefop in cooperation with the Bulgarian team of ReferNet (2018). Vocational training in Bulgaria, <http://data.europa.eu/doi/10.2801/728903>

work environment within 240 hours, and 406 training companies and 2,477 school students are supported in areas of priority importance for the economy.

In the Interim Evaluation of the Implementation of RIS3 2014-2020 conducted in 2020, a high assessment was given of the contribution of the procedures implemented under OPSESG (support for internships, scholarships, practical skills, strengthening business relations) under the sub-objective “Development of quality human resource” of Operational Objective 1 of RIS3, as the highest rated by the beneficiaries is the level of compliance of education with the needs of the labor market and opportunities for vocational training and lifelong learning.

In Bulgaria, VET is mainly implemented in the school education system. Since 2015, as well as many other EU Member States, Bulgaria focuses on promoting learning through work (dual learning system), enabling learners to gain real work experience, familiarising them with skills demanded by employers and with skills that would facilitate their realisation on the labour market. The availability of dedicated and competent teachers, trainers, mentors and other VET professionals is essential to ensure its high quality.

Although legislation promotes dual learning and new curricula and dual vocational education curricula for school year 2017/18, the implementation of dual training at this stage is mainly realised within different projects⁴.

In the 2017/2018 school year, 1,742 pupils in 79 classes in 45 vocational schools were involved in a dual training system. In support of the expansion of the dual system of education in 2020, the implementation of the project "Support for a dual system of education" has started under OPSESG, which envisages the introduction of the dual system in 147 vocational high schools/schools with vocational training classes and to include 9,800 school students for training in the dual education system according to the existing legislative framework.

The main challenges for VET in Bulgaria are traditionally related to: **the need for even closer cooperation with the socio-economic partners; the still insufficient popularity of vocational education; insufficient compliance of the provided VET with the requirements and needs of the labor market; insufficient flexibility of the system for dealing with early school leaving** before acquiring professional qualification, **lack of flexible opportunities for re-inclusion in vocational training**; the lack of a system for increasing the competencies of teachers in professional training for work in an increasingly digital and high-tech environment. A positive trend of the last two years is the active participation and commitment of representative employers’ organisations at national level, as well as a number of industry organisations to increase the profile of VET. In this regard, social partners will be recognised as a key partner in the development of policies and measures to improve the recognition and enforceability of VET, including the dual form of training.

According to the findings of the 2019 EC Report on Bulgaria, **the employability** of graduates with vocational education and training **remains a challenge**. While the share of school students in vocational education and training in Bulgaria is slightly above the EU average (51.3 % compared to 49.3 % in 2016), their employability is 17.1 percentage points lower. This may be partly due to **low participation in work-based learning** schemes (only 22 %

⁴ According to Cedefop in cooperation with the Bulgarian team of ReferNet (2018). Vocational training in Bulgaria, <http://data.europa.eu/doi/10.2801/728903>

of vocational education and training graduates aged 15-34), the lack of universal career guidance from the earliest age and the slow uptake of vocational education and training, only 1 % of school students in vocational secondary schools participated in such dual programmes in the school year 2017/2018.

Most learners go to a vocational education programme at the age of 14 (7th grade). Since for general and vocational education currently the same compulsory matriculation exam should be passed, the main factors in the choice of VET are family traditions and personal preferences. Career guidance is still evolving and does not have a real influence on the choice of learners. On the other hand, the choice of a profession must be responsible and informed. For that purpose, children should be given the opportunity to familiarise themselves with different professions and recognise their future development path.⁵

In the Education and Training Monitoring 2019, the EC points out that the employment rate of recent VET graduates has increased significantly in 2018 (66.4 % compared to 2017 (59.1 %)), however in 2018 it is well below the EU average of 79.5 %.

The government's efforts to increase the applicability of VET to the labor market continue. For the first time for the 2018/2019 academic year, a Decree of the Council of Ministers adopted a List of specialties of professions protected by the state and a List of specialties of professions with an expected shortage of specialists on the labor market. In 2019, school students in these areas and school students from the dual education system will receive additional scholarships and travel expenses will be covered.

According to the *Council Recommendation (2019/C 301/02)*, the relevance of vocational education and training to the labour market and the availability of dual vocational education and training remain insufficient.

Tertiary education

According to data from the Analysis of the socio-economic development of Bulgaria 2007-2017 in 2018, **24.9 % of the working age population has attained a tertiary level of education, increasing by 6.4 percentage points since 2007**, however, the country is increasing its lag towards the Community, because the recorded improvement of the EU average is 8 percentage points reaching 28.5 %. At the same time, there is an increase in the number of doctoral students by 7% and the number of enrolled foreign students. Achieving the national target for 2020 of a 36% share of higher education graduates in the 30-34 age group is still a challenge. According to NSI data for 2019, the share of persons with higher education reached 32.5% for the age range from 30 to 34 (draft Strategy for Development of Higher Education in the Republic of Bulgaria for the period 2021-2030). At the same time, **the relative proportion of the low educated working-age population decreased from 28.7 % (in 2007) to 21.3 % (provisional data for 2018), remaining significantly lower than the European average (25.6 %).**

The best educational characteristics of the population in the country are the **South-Western region, where the population with tertiary education reached 39.2 % in 2017**, significantly surpassing the EU average. The **North-Eastern region** is with relatively good indicators for higher education (26.9 %). The worst performing indicators are in **North-**

⁵ According to Cedefop in cooperation with the Bulgarian team of ReferNet (2018). Vocational training in Bulgaria, <http://data.europa.eu/doi/10.2801/728903>

Western and South-Eastern region, respectively, where only 19.9 % and 21.7 % of the population aged 25-64 have completed tertiary education by 2017.

The working-age population in **predominantly rural areas is characterised by a declining share of higher education (from 11.1 % in 2007 to 8.1 % in 2017)**, while at EU level the proportion of the high-educated population in predominantly rural areas is increasing (by 4.9 percentage points over the period) and up to 20 %. At the same time, the **low educated labour force in the villages increased its share to 39.4 % (compared to 38.3 % in 2007), with a clear reduction in EU of up to 27.6 %**.

Also, according to the *European Commission's* Education and Training Monitor 2019 Bulgaria Report , the enrollment of disadvantaged students is still low.

According to the data from the NDP Bulgaria 2030, the system of higher education in the Republic of Bulgaria covers 52 higher schools, the predominant part of which are relatively small and closely specialized. **According to data from the Rating System of Higher Education Institutions for 2019, only half of the graduating students are realized in the respective profession. There is a shortage of skilled ICT staff, pedagogical and engineering and health professionals in the labour market.** The number of graduates in science, technology, engineering and mathematics or related studies is 13.730 per 1 000 inhabitants aged 20-29, compared to 18.7 per 1 000 inhabitants in the EU on average in the EU. The reasons for this are to some extent due to the initiation of many economic and humanitarian specialties over the past 20 years, which are more attractive to students because of the traditional prestige of the profession or for other reasons. This trend has led to an increase in the number of students in the 'humanitarian sciences' and 'social, economic and legal sciences' fields, for which there is no demand on the labour market, at the expense of the number of professional backgrounds in the field of 'Natural sciences, mathematics and computing' and 'Technical science'.

As stated in the NDP Bulgaria 2030 in recent years, targeted actions have been taken to limit the number of students in specific professional fields with a surplus of staff, as well as to increase admission to specialties with a proven shortage of qualified specialists. To this end, specific measures are already being implemented to support students in these areas, in parallel with the increase in the number of state-subsidized places.

In one of the most prestigious world rankings of the best universities in the world, **QS World University Ranking 2021, is included only one Bulgarian university - Sofia University "St. Kliment Ohridski"**, and for the last year a jump in its ranking was registered from the last group of universities, occupying **800-1,000** to the group of universities, occupying 601-650 place.

The highly fragmented system of tertiary education has low and decreasing efficiency of investment in the sector, in the absence of real incentives to improve the quality and relevance of the offered educational programmes.

As stated in the 2019 EC Report on Bulgaria, higher education is not sufficiently tailored to the needs of the labour market. **In the period 2012-2017, the number of students in higher education dropped by 17 %** as a result of demographic factors and students' preference to study abroad. The share of higher education graduates is increasing, but remains below the EU average (according to NSI data **33.7% in 2018 compared to 40.7% for the EU**). Enrolment of students in ICT-related fields is increasing, but the overall **attractiveness of science, technology, engineering and mathematics has not increased significantly** and

tertiary education attainment rates remain low (**19.7 % in 2019**). Employers often identify knowledge and skills deficiencies, in particular the lack of soft skills among graduates (*CEDEFOP, 2018*).

According to the *NDP Bulgaria 2030*, increasing coherence between the needs of businesses and society on the one hand and programmes in higher education and vocational education and training on the other will remain a key aspect of policies. Closer cooperation and communication between the private and public sectors in the learning process and research activities will be encouraged. Improving the relevance of the labor market and the quality of higher and vocational education remains key for Bulgaria in the context of the situation after the COVID-19 pandemic (European Education Area Progress Report 2020). These activities will also be key to improving the quality of higher education, enhancing their role in generating innovative research and stimulating the relevance of curricula in a global context. In order to increase the economic realization of the results of research and intellectual property in 2020, as well as to promote institutional development, a Decree of the Council of Ministers was adopted, which regulates the terms and conditions for the establishment of companies by public universities.

In support of efforts to improve employability by strengthening skills, including digital skills, the OPSESG in 2020 launched the "Modernization of Higher Education" procedure. The main objective of the procedure is to achieve a dynamic match between the supply and demand of specialists with higher education, by introducing a competency model, multidisciplinary and interdisciplinarity in student education, including through the widespread application of digital transformation of education. The procedure is aimed at modernization of curricula and introduction of digital educational content, electronic resources and cloud technologies in the educational process; professional development of teachers and improvement of their skills for using ICT-based innovative educational technologies; internationalization of higher education institutions and participation in networks.

Despite the rapid transition of higher education institutions to e-learning based during the Covid-19 pandemic, the digitalization process needs to continue, incl. and through targeted investments to provide the necessary resources and quality training of the academic staff.

Applying a systemic approach and bottom-up approaches. Lessons learned.

In 2019, an internal assessment was performed by the Managing Authority of the direct award procedures and the competitive selection procedures under OPSESG. The evaluation analyses the achievement of the objectives of procedures implemented through a systemic approach and those of competitive selection, which aim to support the reduction of **the share of early school leavers**, as the geographical focus of both procedures is localized mainly to school students who are at risk of leaving the education system, as well as participants from vulnerable socially disadvantaged groups and those who have gaps in learning aimed at overcoming learning difficulties, retaining and integrating school students into the education system. The subject of the analysis are several key components, such as: cost-effectiveness of the target groups, territorial scope of the participants included in the measures under the procedures, comparative indicators of the implementation of the indicators and the relevance of the implemented activities according to the objectives of the procedures. The key recommendations made by the evaluation regarding the choice of a systemic approach or competitive selection show that projects with a specific beneficiary achieve much higher efficiency and effectiveness, incl. costs by achieving the objectives of the programme in a

much more explicit way than competitive selection procedures. This in turn minimizes the levels of risk of non-fulfillment of the objectives and indicators of the programme and is a prerequisite for sustainability and high levels of impact.

The analyzed data in terms of cost efficiency compared to the target groups show that in some of the procedures performed through competitive selection, the average cost per participant from vulnerable groups is BGN 1,526.02. In a procedure performed with a specific beneficiary with a similar type of activities, the average cost is BGN 233.08. When comparing the indicators with the budget of the project implemented with a specific beneficiary, the competitive selection procedure would achieve the inclusion of an average of only 68,962 participants. For comparison with the same financial resource, 451,498 participants are included and supported in the system project.

A significant advantage of a systemic approach is the denser regional and territorial scope. The system project considered in the analysis covered participants in all 28 districts of the country, while the considered procedure for competitive selection in the districts of Vidin, Gabrovo and Sliven (in which according to NSI data there is a large concentration of participants from vulnerable socially weak groups) did not cover one participant, and in Silistra district one participant is covered. For comparison, the systemic approach has localized and covered 5,944 participants in Vidin district, 6,371 participants in Gabrovo district, 16,404 participants in Sliven district and 7,693 participants in Silistra district. The difference in geographical distribution is typical for all other areas, and for some of them the differences are huge.

Regarding the relevance of the performed activities in both procedures the leading activity is the additional training in Bulgarian language, as it is much more reliable to follow the educational results from a specific beneficiary - Ministry of Education and Science (MES), in which the registers for the movement of school students and the information could be checked.

Pursuant to §6 of the Additional Provisions of the European Structural and Investment Funds Management Act, the Regional Inspectorates of Education, state and municipal kindergartens, schools and service units may participate in the technical and/or financial implementation, including expenditure on projects with a specific beneficiary. This contributes to the quality and effective implementation of the procedures and projects under the Programme, because with a systemic approach the specific beneficiary will be able to provide and guarantee the costs of schools/kindergartens in case financial corrections and/or fulfillment of other conditions in the European and national legislation, while allowing schools to incur expenditure and be effectively involved in the implementation of project-specific activities.

The conclusions of the internal evaluation are also confirmed by the evaluations of the ESF support for the promotion of social inclusion, the fight against poverty and all forms of discrimination (Thematic objective 9) and of the ESF support for education and training (Thematic objective 10). The research shows as a positive result the development of national standards after the implementation of a project under OPSESG in Bulgaria. The ESF funds financed the development of methodologies for working with children with special educational needs. The study concludes that the methodologies developed under the OPSESG project have been further developed into national standards precisely due to the condition that the project is managed by the Ministry of Education and Science.

Regarding the assessment of the effectiveness of the operations in the special study for Bulgaria, it was confirmed that the system operations of the MES are more effective than the operations of a competitive approach due to their scale and method of implementation. The Investment Priority (IP) 9i and IP 9ii operations under OPSESG have a lower price per participant than the EU average. The costs per participant in IP 9i operations are EUR 851, which is 41% less than the EU average. The cost per participant in IP 9ii operations is EUR 308, which is approximately 63% of the EU average. The added value of the support of the ESF under OPSESG is also taken into account with the developed methodologies for working with children with special educational needs, which become the basis for the development of national standards.

With regard to the support under Thematic objective 10, the role of local, regional and national authorities is mentioned in the EC assessment as one of the success factors of the ESF-funded projects under Investment priority 10i. When these bodies play a central role in the implementation of projects, especially in the field of inclusive education and reducing the share of ESL, this helps to ensure that approaches are developed and coordinated at a wider level. It does not rely on specific organizations, such as project implementation management schools. The systemic approach allows for longer-term training and sustainability of results, including through changes at system level. Another factor for the success of operations that are implemented as systemic is the possibility of enhanced coordination and participation of local and regional stakeholders, in cases where it is necessary to adapt programmes to specific needs, such as early school leaving or lifelong learning.

Based on the above analyses and studies in the Education Programme 2021-2027, a balanced approach to providing grants has been adopted, taking into account the objectives of the programme, the needs of the target groups, the need to continue structural reforms in certain areas of education or the need of strengthening the capacity at territorial and local level and at the level of educational institutions, introducing new models and approaches or encouraging activity.

For operations aimed at, for example, enrolling in the education system and ensuring equal and inclusive access to education, reducing the proportion of early school leavers, digital transformation of school education, introduction of a competency model of teaching and learning, through modernization of curriculum, as well as modernization of horizontal policies at national level, a systemic approach to the implementation of operations will be sought, in which the MES will have a leading coordinating role in the implementation of activities so as to cover the entire territory of the country and ensure equal access to education. In the implementation of systemic operations opportunity will be provided to participate in the technical and financial implementation of the activities of a maximum range of educational institutions, which will be included on the basis of identified, justified and protected by them specific needs of target groups or such related to the capacity for conducting educational policies. An appropriate form of partnership with the social and economic partners and civil society representatives will be sought.

It is envisaged that operations aimed at stimulating the introduction of new or innovative approaches in education or those encouraging activity, participation and competition to generate better ideas between beneficiaries will be carried out through project selection procedures, and those that are aimed at specific needs at the territorial level, to overcome local barriers to access to education or to promote the partnership between educational

institutions, social and economic partners and civil society at the local level to be implemented through the tools for integrated territorial development.

Programme strategy:

Based on the identified needs, the programme will focus on:

- A more comprehensive coverage of children in pre-school education and the primary stage of school education, including a more comprehensive coverage of children in kindergartens from the age of 4;
- Comprehensive inclusive education in basic and secondary education, through general and additional support for personal development, early diagnosis of learning difficulties and a tailored approach focusing on the support of children and pupils from vulnerable groups, including those whose mother tongue is different from Bulgarian, and measures aimed at reducing the rate of early school leavers;
- Promoting the educational integration of children and school students from vulnerable groups, including Roma and migrants, through partnership and funding for local needs, with a focus on areas with a concentration of vulnerable groups;
- Providing access to career guidance for children and adolescents, including as a means of preventing school failure, absenteeism, dropping out of school, anti-social behavior of children and school students;
- Ensuring the quality of inclusive education by modernizing the curriculum, introducing the competency model and improving skills, digital transformation of education, with opportunities to expand the scope of distance learning, promoting excellence in education, by supporting talented children and school students, innovative curricula, innovative classrooms and innovative schools;
- Ensuring flexible planning of vocational education and training, adequately reflecting changing labour market trends, including the development of digitalisation and technology, the future of occupations and new forms of organisation and the development of the labour market, demographic trends and trends towards a green economy and sustainable development;
- Improving the quality and applicability of vocational training and education in relation to the needs of the labor market, and its link to specific territorial characteristics, taking into account global, national and sectoral trends, by modernizing the content, introducing flexible models and forms of training, enhanced participation in learning schemes in the work process, increasing the share of the dual form of training in VET, creating systems for tracking graduates. Strengthening the connection of VET with higher education and science and creating common spaces for learning – VET, HE and science with a connection to the needs of the labor market, as well as participation in regional, sectoral, national and European networks;
- Enhancing the attractiveness and accessibility of VET for all ages, including by developing individual training pathways and opportunities for online trainings;
- Horizontally, the improvement of the skills, capacity and continuous qualification of pedagogical and non-pedagogical specialists, teachers and educational leaders/managers in pre-school and school education, vocational education and training will be supported, with emphasis on teacher training, digital competencies,

work with children and school students with problem behavior and those from vulnerable groups, incl. updating the curricula for teacher training in higher education;

- Increasing the applicability of higher education and linking it to the needs of the labor market by increasing innovation and entrepreneurship, providing graduate tracking systems, career guidance, student placements and the transition to a dual system of higher education, including through enhanced partnerships with nationally representative organizations of employers;
- Modernization of higher education, by updating the training documentation, introducing a competence-approach in teaching and learning, digital transformation and strengthening the link with science;
- Internationalization and consolidation of higher education, by promoting the circular and incoming mobility of teachers and students, participation in building university networks, joint curricula and resource sharing;
- Improving the qualification and improving the skills of teachers and academic staff in higher education.

Priority 1 will contribute directly to achieving the following contextual indicator: "Reducing the proportion of early school leavers" set out in the Partnership Agreement and the Bulgaria 2030 Strategy.

Priority 2 will contribute directly to the achievement of the following contextual indicators:

- "Quality of the education system" set in the Partnership Agreement;
- Population with basic digital skills (DESI), enshrined in the Partnership Agreement and the Bulgaria 2030 Strategy.

Priority 3 will contribute directly to achieving the following contextual indicator: "Participation in "lifelong learning" for people aged 25-64" set in the Partnership Agreement.

For Jobs and growth objective:

TABLE 1		
Policy objective	Specific objective or dedicated priority*	Justification (summary)
PO 4 A more social Europe by implementing the European pillar of social rights	<i>ESF+</i> <i>(iv) improving the quality, effectiveness and labour market relevance of education and training systems, to</i>	[2 000 per specific objective or dedicated priority]] Support under this specific objective will focus on addressing the following high priority investment needs, outlined in Annex D of the 2019 European Semester Report for Bulgaria: - creation of quality inclusive school education; ensuring the acquisition of basic and digital skills and promoting inclusion in the field of education and training;

	<p><i>support acquisition of key competences including digital skills</i></p>	<ul style="list-style-type: none"> - support teachers' and trainers' professional development and promote innovative teaching methods and content to best support disadvantaged school students; - increasing the attractiveness, quality and applicability of vocational education and training programmes and promoting participation in adult learning; - improve quality and labour market relevance of higher education, including joint research actions and traineeships in companies. <p>The programme will support the transformation of Bulgarian education by modernising education institutions, improving the quality of education, introducing innovative teaching methods, updating curricula and introducing digital change in learning and teaching, as well as ensuring equal access to quality and inclusive education for all.</p> <p>To address the weaknesses in the quality of the educational service provided and the reform of the education sector, the Programme will strengthen the focus on learning the key competences for lifelong learning (including digital, linguistic, social) from an early age in the framework of the formal education and at the same time to raise awareness of the value of education, training and learning. Important emphases in this regard are the acquisition of functional literacy, relevant (inter) disciplinary and practice-oriented knowledge and skills, as well as the development of creative and critical thinking, responsibility and problem-solving skills, civic engagement.</p> <p>Funding will focus on improving the quality and relevance of school education for achieving professional fulfilment. In this respect, of key importance will be the updating of educational plans and curricula, flexible pathways and programmes for second chance, the acquisition of professional skills, the training of teachers and the introduction of innovative teaching methods, the maintenance of a modern educational environment, the development of partnership formats with business and higher education, effective management of VET, as well as the extension of the geographical scope of the dual training and the increase of the possibilities for its implementation in a variety of occupations adapted to the needs of the business at regional and local level.</p> <p>Increasing coherence between the needs of business and society, on the one hand, and curricula in higher education</p>
--	---	---

		<p>and in vocational education and training, on the other, will remain a key aspect of the policies supported by the programme. Closer cooperation and communication between the private and public sectors within the learning process will be encouraged, incl. the involvement of the social partners in the formulation and implementation of policies in these areas. Efforts to consolidate public higher education institutions by providing financial incentives, focusing on public support and increasing opportunities for public-private partnerships will be supported.</p> <p>The focus will be on training in professions and specialties in demand on the labor market. Support will be linked to the contribution to the labour market and learning outcomes.</p>
<p>PO 4</p> <p>A more social Europe by implementing the European pillar of social rights</p>	<p><i>ESF+</i></p> <p><i>(v) promoting equal access to and completion of, quality and inclusive education and training, in particular for disadvantaged groups, from early childhood education and care through general and vocational education and training, and to tertiary level, as well as adult education and learning, including facilitating learning mobility for all</i></p>	<p>[2 000 per specific objective or dedicated priority]]</p> <p>Support under this specific objective will focus on addressing the following high priority investment needs, outlined in Annex D of the 2019 European Semester Report for Bulgaria:</p> <ul style="list-style-type: none"> - improve inclusive, accessible and quality early childhood education and care, including relevant infrastructure and equipment; - prevent early school leaving with a targeted approach and promote flexible second chance programmes; - creating quality inclusive school education, including investments; - support teachers' and trainers' professional development and promote innovative teaching methods and content to best support disadvantaged school students; <p>Sustained implementation of policies to cover and include children and pupils in the pre-school and school education system and reduce the share of early school leavers will be continued. In this context, priority will be given to integrated and targeted policies to ensure the right of each child to quality education and to prevent dropping out of school, with a focus on children and pupils from vulnerable groups. They will be implemented with policies and measures aimed at increasing the share of secondary graduates and encouraging young people's participation in formal and non-formal education and training.</p> <p>The programme will address the following main needs and challenges:</p>

		<ul style="list-style-type: none"> - Reducing proportions of enrolled children aged 3-6 years; - Reducing group net enrollment ratio of school students from I to IV grade; - Low coverage in the different educational stages. - High relative share of the population with primary and lower education; - A significant share of early school leavers; <p>More than half of people with disabilities drop out of education early and only 34 % have jobs.</p> <p>Almost half of the teachers are over the age of 50 and are likely to reach the retirement age within the next 10 years; 10% are already older than 60.</p> <ul style="list-style-type: none"> - The percentage of teachers for whom there is a significant need for training in the field of student behavior and classroom management, as well as in the field of teaching in a multicultural or multilingual environment, is also higher than the average values for the surveyed 23 European countries (22% compared to the EU-23: 12.5% and 21% compared to the EU-23: 13%).
<p>PO 4</p> <p>A more social Europe by implementing the European pillar of social rights</p>	<p><i>ESF+</i></p> <p><i>(vi) promoting lifelong learning, notably flexible upskilling and reskilling opportunities for all taking into account digital skills, better anticipating change and new skills requirements based on labour market needs, facilitating career transitions and promoting</i></p>	<p>[2 000 per specific objective or dedicated priority]]</p> <p>Support under this specific objective will focus on addressing the following high priority investment needs, outlined in Annex D of the 2019 European Semester Report for Bulgaria:</p> <ul style="list-style-type: none"> - creation of quality inclusive school education; - improving the quality and applicability of higher education to labor market requirements, including joint research activities and traineeships in enterprises. <p>The programme will continue to support policies to increase literacy at all levels of education and to promote lifelong learning. Measures aimed at adult literacy and learning content courses for the various educational stages and degrees and the acquisition of professions will be implemented. The promotion of the need to increase and promote literacy and draw public attention to the benefits of literacy will be encouraged.</p> <p>The interventions are aimed at overcoming the following challenges:</p>

	<i>professional mobility</i>	<p>-In 2018, the participation in adult education is at a level of 2.5%, which is significantly below the EU average of 11.1%;</p> <p>- The share of low-skilled adults participating in training amounts to about a quarter of the total population.</p> <p>In addition, the programme will support policies related to continuing education of academic staff in higher education and training of researchers. The increase of their digital skills, specializations abroad, qualification of the academic staff and the employees will be stimulated, incl. foreign language teaching, development of soft and research skills, improvement of teaching skills, attracting teachers from abroad.</p>
<p>PO 4</p> <p>A more social Europe by implementing the European pillar of social rights</p>	<p><i>ESF+ (viii) Promoting socio-economic integration of third country nationals and of marginalised communities such as the Roma</i></p>	<p>[2 000 per specific objective or dedicated priority]]</p> <p>Support under this specific objective will focus on addressing the following high priority investment needs, outlined in Annex D of the 2019 European Semester Report for Bulgaria:</p> <ul style="list-style-type: none"> - improve inclusive, accessible and quality early childhood education and care, including relevant infrastructure and equipment; - prevent early school leaving with a targeted approach and promote flexible second chance programmes; <p>The specific needs identified for marginalized groups, such as the Roma, will also be addressed:</p> <ul style="list-style-type: none"> - Only 66% of Roma children aged 4-6 attend kindergarten in 2016; - 7% of Roma do not attend any level of education, and about 45% of Roma do not complete secondary education; - According to the FRA EU-MIDIS II survey, 60% of Roma children study in a classroom with only Roma school students or a predominant number of Roma school students. This is happening not only in rural areas, but also in large cities, where <i>de facto</i> segregated schools operate; - The educational structure of the Roma and Turkish ethnic communities, as according to data from the last national census 93% and 70% of the representatives of these ethnic groups do not complete their secondary education, respectively, compared to about 30% for ethnic Bulgarians;

		Every fourth Roma child and every ninth Turkish child aged 7-15 have never attended school, compared with 5.6 % of children in the Bulgarian ethnic group.

2.1. Title of the priority [300] (repeated for each priority)

PRIORITY 1 — INCLUSIVE EDUCATION AND EDUCATIONAL INTEGRATION

This is a priority dedicated to a relevant country-specific recommendation

This is a priority dedicated to youth employment

This is a priority dedicated to innovative actions

This is a priority dedicated to addressing material deprivation**

*Table applicable to ESF+ priorities.

** If marked go to section 2.1.2

2.1.1. Specific objective V⁶(Jobs and growth goal) or Area of support (EMFF) – repeated for each selected specific objective or area of support, for priorities other than technical assistance

SO V — Promoting equal access to and completion of, quality and inclusive education and training, in particular for disadvantaged groups, from early childhood education and care through general and vocational education and training, and to tertiary level, as well as adult education and learning, including facilitating learning mobility for all

2.1.1.1. Interventions of the Funds

Reference: Article 17(3)(d)(i)(iii)(iv)(v)(vi);

The related types of actions – Article 17(3)(d)(i):

Text field [8 000]

1. Extension of pre-school and primary education, by supporting the cooperation mechanism of the institutions involved in the coverage and participation in the education system of children and pupils in compulsory pre-school and school age, including:

- 1.1. Expanding participation, incl. by appointing educational mediators and coordinating coverage teams;
- 1.2. Training and enhancing the capacity and skills of the scope teams;
- 1.3. Building and linking tracking systems for travel and migration of the exercise of children's right to compulsory education;
- 1.4. Setting up and linking information exchange systems and checking health notes for excuses for children and pupils;
- 1.5. Targeted information activities and work with parents to explain the benefits of education and the obligations for inclusion in pre-school and compulsory school education, incl. by engaging community-based NGOs;
- 1.6. Promoting the creation of sustainable partnerships between schools, kindergartens and non-governmental organizations to ensure full coverage and prevention of dropping out.

⁶ Except for a specific objective set out in Article 4(1)(c)(vii) of the ESF+ Regulation.

2. General and additional support for personal development in pre-school education, including:

- 2.1. Increasing the capacity, qualification and skills of pedagogical and other specialists, including for the formation and implementation of policies to increase the scope of pre-school education and increase the quality of pre-school education in the specific institution. Increasing participation incl. through the appointment, training and supervision of educational mediators in active inclusion in the pre-school education;
- 2.2. Providing additional psychologists, pedagogical advisors, speech therapists, resource teachers, sports coaches and other specialists according to the needs of children, for the implementation of general and additional support for personal development in kindergartens and pre-school groups in school;
- 2.3. Activities of interest to stimulate the development of personal qualities, social and creative skills and manifestations of abilities in the field of science, technology, arts, sports, global, civic, health and intercultural education, education for sustainable development – nature conservation, use of recyclable materials, separate collection, etc., as well as for acquiring leadership and community skills and teamwork;
- 2.4. Health care by development and implementation of modern health education programmes, healthy diets, first-aid, safe road traffic, training on various sports, etc.;
- 2.5. Early needs assessment and prevention of learning difficulties; activities for prevention of violence and overcoming problematic behavior; speech therapy work;
- 2.6. Training through additional modules for children who do not speak Bulgarian; activities to implement programmes of psychomotor, cognitive and linguistic development; individual and group work in the case of established linguistic and/or emotional behaviour and/or sensory difficulties.
- 2.7. Psychological support and additional Bulgarian language training for children in nursery and pre-school education groups.
- 2.8. An assessment of the individual needs of the child for provision of additional support for personal development and the provision of additional support for personal development;
- 2.9. Enhancing the language culture and knowledge through learning a foreign language from the earliest childhood to pre-school age;
- 2.10. Intensified monitoring of the progress of the learning process in kindergartens and pre-school groups in schools in order to ensure early warning of early school leaving;
- 2.11. Providing fees for disadvantaged children;
- 2.12. Providing specialized supportive educational environment, such as equipment and furnishing of resource rooms, according to the needs of the supported educational institutions.
- 2.13. Support for intensive work with parents: short term trainings for parents about their rights and obligations related to the education of their children and for forming in

them motivation for active inclusion of their children in the system of pre-school and school education.

The group of activities will upgrade the project "Active Inclusion in the Pre-school Education System" under the OPSESG in the period 2019–2021, aimed at supporting the policies of the Ministry of Education and Science to improve access to education, early socialization with a focus on children from vulnerable groups. The growing need to address issues such as social exclusion, discrimination and low educational attainment shows that work must continue to ensure equal access to quality early childhood education and care, as the most important basis for successful lifelong learning.

1. General and additional support for personal development in school education, including:

- 1.1. Increasing the capacity, qualification and skills of pedagogical and other specialists, including for the formation and implementation of policies to increase the scope of school education and increase the quality of school education in the specific institution. Increasing participation incl. through the appointment, training and supervision of educational mediators in active involvement in school education;
- 1.2. Provision of additional psychologists, pedagogical counsellors, speech therapists, resource teachers, coaches by type of sport and other specialists according to needs, in order to realise the general and additional support for personal development in schools;
- 1.3. Assessment of the individual needs of the student of providing additional support for personal development, as well as ensuring additional support for personal development;
- 1.4. Additional training and advising in school subjects; career guidance of school students; development of basic skills, activities of interest, priority in the thematic areas: 'Digital creativity', 'Natural Sciences', 'Mathematics', 'Technology', 'Arts and culture', 'Civil education', 'Environmental education and health', 'Sport'; library information services; health care; provision of a hostel; activities to prevent violence and address problem behaviour; activities to prevent learning difficulties; speech therapy;
- 1.5. Incentives with moral and material awards for excellence in educational activities, activities of interest and their contribution to the development of the institutional community;
- 1.6. Developing the physical qualities and skills of pupils by providing training in sports and sports activities in schools, providing and implementing sporting activities within the framework of the all-day training of pupils at the primary stage of basic education, the formation of school sports teams by sport and groups for sporting activities, creation of effective school partnerships with sports clubs;
- 1.7. Career guidance for school students;
- 1.8. Health care by development and implementation of modern health education programmes, healthy diets, first-aid, safe road traffic, training on various sports, etc.;

- 1.9. Enhanced monitoring of learning progress in schools for early warning of early departure of the system;
- 1.10. Providing specialized supportive educational environment, such as equipment and furnishing of resource rooms, according to the needs of the supported educational institutions;
- 1.11. Support for intensive work with parents: short term trainings for parents about their rights and obligations related to the education of their children and for forming in them motivation for active inclusion of their children in the system of pre-school and school education.

The group of activities will upgrade the extremely effective and comprehensive projects under OPSESG – "Your class", which focuses on the individual needs of school students and the development of their talents and abilities in selected areas and to increase their success and retention in the education system and "Support for Success", which aims to reduce the proportion of early school leavers as well as their reintegration into the educational process. The tools and mechanisms developed in the period 2014–2020 will be used in order to focus on direct work with school students.

2. The implementation of the priority activities will complement the results achieved by the project implemented by UNICEF Bulgaria (2020–2022) supporting the pilot testing of the initiative for the European Child Guarantee for equal access of children to free healthcare, free education, free early childhood education and care, decent housing and adequate nutrition. The project will work with government, regional and local authorities, healthcare, education, child protection and social services, NGOs, academia and other stakeholders to ensure access to home, early childhood intervention, inclusive pre-school education and integrated child and family support services for children with disabilities and developmental difficulties and children in insecure family situations and their families in three pilot districts – Burgas, Sliven and Stara Zagora. **Preventing harassment and reducing aggression in schools, including:**

- 2.1. Campaigns for tolerance and reduction of pupils' aggression and impact on internal motivation, as well as psychological support for children and pupils, pedagogical specialists and parents;
- 2.2. Support for the use of facilitators in resolving conflict at school, counselling of children or pupils with a psychologist/pedagogical advisor;
- 2.3. Increase the competences and skills of teachers to use and implement forms and methods to counter harassment, violence, etc. to work with children and pupils with SEN, work with parents, counter negative events such as aggression/anger — recognition, reasons and prevention.
- 2.4. Involving school students with problem behaviour in groups for raising social skills for communication and for resolving conflicts in a non-violent way, targeting the child or pupil to activities tailored to their needs; mentoring;
- 2.5. Participation of school students in school governance and support for volunteering initiatives.

List of planned operations of strategic importance – Article 17(3)(d)(i):

Text field [2 000]

- 1. The extension of pre-school and primary education, by supporting the cooperation mechanism of the institutions involved in the coverage and participation in the education system of children and pupils in compulsory pre-school and school age;**
- 2. General and additional support for personal development in pre-school education;**
- 3. General and additional support for personal development in school education;**

These operations of strategic importance are envisaged to be implemented as long-term operations with systemic effect. These operations will provide for a specific evaluation and monitoring plan to allow for an impact assessment in the course of implementation and a flexible update mechanism will be established, depending on the results of the assessment and monitoring.

The main target groups – Article 17(3)(d)(iii):

Text field [1 000]

Children, school students, parents, teachers, pedagogical and other professionals and other staff; educational mediators; children and school students with special educational needs; children and school students from marginalized groups, such as the Roma, as well as those seeking or receiving international protection from other vulnerable groups. Children and school students with gaps in the acquisition of educational material, children and school students at risk of dropping out of the education system, parents of children from vulnerable groups, incl. Roma, early school leavers, etc.

Participants in the educational process, the Ministry of Education and Science and its secondary authorising officers, the Ministry of Culture, the Ministry of Youth and Sports, the institutions in the system of pre-school and school education, municipalities, non-governmental organizations.

Specific territories targeted, including the planned use of territorial tools – Article 17(3)(d)(iv)

Types of support

Text field [2 000 characters]

Main target groups

Text field [2 000 characters]

Description of the national or regional schemes of support

Text field [2 000 characters]

Criteria for the selection of operations⁹

Text field [4 000 characters]

⁹ Only for programmes limited to the specific objective set out in Article 4(1)(c)(vii) of the ESF+ Regulation

2.1.2. Specific objective VI¹⁰(Jobs and growth goal) or Area of support (EMFF) – repeated for each selected specific objective or area of support, for priorities other than technical assistance

SO VI – Promoting lifelong learning, notably flexible upskilling and reskilling opportunities for all taking into account digital skills, better anticipating change and new skills requirements based on labour market needs, facilitating career transitions and promoting professional mobility

2.1.2.1. Interventions of the Funds

Reference: Article 17(3)(d)(i)(iii)(iv)(v)(vi);

The related types of actions – Article 17(3)(d)(i):

Text field [8 000]

1. Adult literacy, including:

- 1.1. Reintegration into the educational system of persons over age 16, dropped out of school and/or without primary education, through educational mediation activities;
- 1.2. Organizing and conducting adult literacy courses and learning content courses for different educational stages and levels for persons with low education or no education in coordination with the Employment Agency and the MLSP, in order to be subsequently included in acquisition opportunities for obtaining professional qualification;
- 1.3. Promoting the need to enhance and encourage literacy and to raise social awareness of the benefits of enhancing literacy;
- 1.4. Inclusion in education and training of those, who have not completed secondary education.
- 1.5. Validation of non-formal learning and informal learning outcomes by assessing and recognizing the correspondence between competences acquired through non-formal and informal learning and the requirements for completing a grade, stage or level of primary education.
- 1.6. Supporting the transition from education to realization at the labor market.

The positive effect achieved from the implementation of the project "Adult Literacy – Phase 1" under OPSESG shows that it is necessary to continue working with the target groups to complete a degree of education and focus on higher education degree. In this regard, the activities will be focused taking into account the experience of implementing adult literacy measures through a targeted approach coordinated by the Ministry of Education and Science and in applying a competitive selection procedure – Adult Literacy – 2. In view of the established need for enhanced partnership at the regional level in the implementation of adult literacy activities, it is necessary to conclude that the most appropriate tool for their implementation is the approach to Integrated Territorial Investment.

List of planned operations of strategic importance – Article 17(3)(d)(i):

¹⁰ Except for a specific objective set out in Article 4(1)(c)(vii) of the ESF+ Regulation.

Text field [2 000] NA

The main target groups – Article 17(3)(d)(iii):

Text field [1 000]

Pupils, young people, adults outside compulsory school age, parents, teachers, educators and other staff, people with special educational needs, young people and adults from marginalized groups such as the Roma, as well as those seeking or receiving international protection from other vulnerable groups.

Participants in the educational process, the Ministry of Education and Science and its secondary budget managers, Employment Agency, State Agency for Refugees, Agency for Social Assistance, institutions in the school education system, municipalities, non-governmental organizations.

Specific territories targeted, including the planned use of territorial tools – Article 17(3)(d)(iv)

Text box [2 000] The activities under specific objective vi of "Inclusive Education and Educational Integration" priority will be implemented at regional level, through the instrument for Integrated Territorial Investment.

The specific needs and operations at local and regional level will be identified in the Integrated Territorial Development Strategies (ITDS) of the NUTS Level 2 regions approved by the Regional Development Councils. The activities of the programme within the ITI approach will be implemented on the basis of integrated concepts, to achieve a specific goal or priority of the integrated territorial strategy of the region. They will be prepared and implemented in partnership between various local stakeholders (municipalities, NGOs, educational institutions, etc.) and in which, according to the identified needs of the respective region, activities set in the municipal action plans for integration of participants from vulnerable groups will be included. The identified PE projects within the ITI concept will be implemented in coordination with the projects under the other programmes providing funding under the concept. In this way, the specific territorial needs will be taken into account and the principle of partnership–cooperation between the various stakeholders and participants in the socio–economic life of the specific territory/region will be applied and a better focus of investments will be achieved.

2.1.3.1. Interventions of the Funds

Reference: Article 17(3)(d)(i)(iii)(iv)(v)(vi);

The related types of actions – Article 17(3)(d)(i):

Text field [8 000]

1. Enabling access to education by addressing demographic, social and cultural barriers, including:

- 1.1. Providing transportation, meals, and school student dormitories;
- 1.2. Increasing the skills of children and school students for learning and communication in a multicultural environment, including psychological support and additional training for children/ school students with educational difficulties, incl. additional trainings in Bulgarian language, sharing of cultural identity and values;
- 1.3. Increasing the capacity of pedagogical specialists and educational mediators to work in a multicultural education environment;
- 1.4. Encouraging the participation of parents in the educational process in a multicultural educational environment; Support for intensive work with parents: short term trainings for parents about their rights and obligations related to the education of their children and for forming in them motivation for active inclusion of their children in the system of pre-school and school education.
- 1.5. Promoting inter-school exchange and sharing of educational resources, including joint activities between schools and kindergartens, with concentration of vulnerable groups and those without concentration of vulnerable groups, including exchange visits, excursions, green schools, etc.;
- 1.6. Support for ensuring access to quality education in small settlements and in least accessible areas, through teacher mobility and adaptation to the work environment in different areas and with different groups of school students, through adaptation programmes and social packages for young teachers.
- 1.7. Providing textbooks, teaching aids and materials; additional work of pedagogical specialists with school students from marginalized groups (including in the summer);
- 1.8. Increasing the participation of educational mediators incl. through recruitment, training and supervision.
- 1.9. Organizing volunteer campaigns in support of the respective school;

2. Comprehensive programmes at municipal level for desegregation of schools, prevention of secondary segregation and against discrimination, including:

¹³ Except for a specific objective set out in Article 4(1)(c)(vii) of the ESF+ Regulation.

- 2.1. Prevention and non-discrimination in educational institutions towards trainers and learners, through the preparation of practical guides, information campaigns and training seminars;
- 2.2. Promoting desegregation of schools and classrooms, forming a supporting public environment, interschool activities, securing partnership with local communities and the civil sector, further working with pupils in host schools, further working with parents and others;
- 2.3. Addressing negative societal attitudes based on ethnic origin and cultural identity (including by conducting information campaigns aimed at preventing discrimination on grounds of race, ethnicity or religion);
- 2.4. Measures for validation of knowledge and skills and inclusion in the educational system of school students, incl. and for school students and/or educated abroad;
- 2.5. Synergy with Erasmus+ – mobility of teachers, student mobility, with a focus on socially disadvantaged and vulnerable groups;
- 2.6. Preparation and introduction of adapted teaching materials and aids for school students whose mother tongue is different from Bulgarian.
- 2.7. Encouraging the participation of parents in the educational process in a multicultural educational environment; Support for intensive work with parents: short term trainings for parents about their rights and obligations related to the education of their children and for forming in them motivation for active inclusion of their children in the system of pre-school and school education.
- 2.8. Promoting inter-school exchange and sharing of educational resources, including joint activities between schools and kindergartens, with concentration of vulnerable groups and those without concentration of vulnerable groups, including exchange visits, excursions, green schools, etc.;
- 2.9. Increasing the participation of educational mediators incl. through recruitment, training and supervision.
- 2.10. Organizing volunteer campaigns in support of the respective school;

3. Access for vulnerable groups to higher education, including:

- 3.1. Support for prospective students from vulnerable groups by conducting candidate student courses, providing textbooks and teaching aids, paying fees for applications for universities;
- 3.2. Support for students from vulnerable groups through: provision of textbooks and teaching aids, payment of rent for student dormitories, payment of semester fees in higher schools;
- 3.3. Support for continuing education in the second stage of secondary education and in higher education, such as: conducting information campaigns promoting the opportunities and conditions of higher education institutions to accept and train young people from vulnerable groups.

3.4. Encouraging parents' participation in the education process and the benefits of training and completion of higher education.

3.5. Support for the participation of educational mediators.

4. Validation of intercultural education through culture, science and sports, incl.

4.1. Extracurricular activities for introduction of intercultural education and education for tolerance, through joint activities between kindergartens and schools with concentration of children from vulnerable groups, and those in which there is no concentration of children from vulnerable groups, incl. exchange visits, excursions, green schools, etc.

4.2. Organizing and conducting the learning process in a real environment through outdoor activities in museums, art galleries, cultural institutions, those related to cultural and natural heritage, visual arts, sports and music events.

4.3. Organizing thematic meetings and talks of school students with representatives from different professional backgrounds, scientists, artists, cultural figures, athletes to promote opportunities for professional development and personal development of school students through education.

4.4. Conducting cultural and educational initiatives promoting reading and literacy in libraries, as part of training in educational strands.

4.5. Conducting extracurricular activities in extracurricular form, through outsourced activities to develop attitudes towards culture and acquire knowledge about cultural and literary heritage, reading, creative thinking, environmental, natural and exact sciences.

4.6. Organizing excursions to visit important historical and cultural sites with presentation of the educational content on a specific topic.

4.7. Organizing visits to acquire knowledge and interests in the field of theater, music and dance.

4.8. Support for intensive work with parents: short trainings for parents related to the education of their children.

4.9. Conducting information campaigns aimed at preventing discrimination based on race, ethnic origin or religion

4.10. Increasing the participation of educational mediators incl. through recruitment, training and supervision.

4.11. Organizing volunteer campaigns in support of the respective school;

List of planned operations of strategic importance – Article 17(3)(d)(i):

Text field [2 000] NA

The main target groups – Article 17(3)(d)(iii):

Text field [1 000]

Children, school students, parents, teachers, pedagogical and other specialists and other staff; children and school students with special educational needs; children and school students from marginalized groups, such as Roma seeking or receiving international protection and from other vulnerable groups. Children and school students with gaps in the assimilation of educational material, children and school students at risk of dropping out of the education system, parents of children from vulnerable groups, incl. Roma, early school leavers, students from vulnerable groups, etc.

Participants in the educational process, the Ministry of Education and Science and its secondary authorising officers, the Ministry of Culture, the Ministry of Youth and Sports, the institutions in the system of pre-school and school education, municipalities, non-governmental organizations.

Specific territories targeted, including the planned use of territorial tools – Article 17(3)(d)(iv)

Text field [2 000] The following groups of activities are planned:

- **Creating conditions for access to education by overcoming demographic, social and cultural barriers** to be realized at territorial level, using the approach of **Community-led local development (CLLD)**.
- **Comprehensive programmes at municipal level for desegregation of schools, prevention of secondary segregation and anti-discrimination to be implemented through ITI**

The operations of the Education Programme under the CLLD approach will be implemented on the basis of the proven territorial needs at the local municipal level, laid down in the strategies of the Local Action Groups developed after a thorough analysis. The Education Programme will fund operations under the CLLD approach of the LAG's multi-fund strategies, thus ensuring synergies and complementary effects between the various operational programmes, which is extremely applicable to PE given the role of all stakeholders in the education process – teachers, parents, children and school students, educational institutions, civil society, other institutions and stakeholders. Coordination between programmes and funds will ensure the integrative element of the CLLD approach in multi-fund strategies, while the establishment and operation of LAGs by municipalities and local communities on a bottom-up basis will complement national policies in ensuring access to education and overcoming local segregation on initiative and with the participation of local communities.

- Validation of intercultural education, through culture, science and sports to be implemented at national level, through a competitive selection procedure.

<input type="checkbox"/> This is a priority dedicated to a relevant country-specific recommendation
<input type="checkbox"/> This is a priority dedicated to youth employment
<input type="checkbox"/> This is a priority dedicated to innovative actions
<input type="checkbox"/> This is a priority dedicated to addressing material deprivation**

*Table applicable to ESF+ priorities.

** If marked go to section 2.1.2

2.2.1. Specific objective IV¹⁷(Jobs and growth goal) or Area of support (EMFF) – repeated for each selected specific objective or area of support, for priorities other than technical assistance

(iv) improving the quality, effectiveness and labour market relevance of education and training systems, to support acquisition of key competences including digital skills

2.2.1.1. Interventions of the Funds

Reference: Article 17(3)(d)(i)(iii)(iv)(v)(vi);

The related types of actions – Article 17(3)(d)(i):

Text field [8 000]

1. Introduction of the competency model, through modernization of the curricula and content, preparation of individual curricula and individual curricula of school students with special educational needs and school students with outstanding talents and increasing the capacity of pedagogical specialists, including:

- 1.1. The development of key competences at all educational levels, including by promoting different learning approaches and learning environments, including reading, numeracy, digital literacy, key competences in the fields of science, civic activism, teamwork, career guidance, socio-emotional skills;
- 1.2. Developing a programme to work with pupils for whom the Bulgarian language is not the mother tongue;
- 1.3. Training and increasing the capacity and skills of teachers and non-pedagogical specialists to work with modernized curriculum,
- 1.4. Testing of pilot models for working with modernised learning content and programmes, including their introduction to tele-education form; increasing the skills of pupils and teachers;
- 1.5. Introducing and promoting quality assurance measures through monitoring, analysis and evaluation of education and training.

¹⁷ Except for a specific objective set out in Article 4(1)(c)(vii) of the ESF+ Regulation.

- 1.6. Improving the educational side by establishing STEM centers and offices for the application of new teaching methods.

According to a recommendation of the Council of the European Union of 22 May 2018, the key competences are a combination of knowledge, skills and attitudes, with an emphasis on basic skills (literacy in reading, foreign languages and basic digital skills), transferable skills, entrepreneurship, skills development in science, technology, engineering, and mathematics (STEM), democratic citizenship, sustainable development, etc. It should be noted that all key competences are considered equally important, they overlap and are interconnected. And more importantly, they are acquired in an integrated way through the teaching of all subjects. All this brings out the need of modernizing the curricula and increasing the capacity of pedagogical professionals to improve the quality of education by introducing the competency model. In this regard, the systemic approach will have a full and targeted scope of the target groups and will be essential in improving the quality of education and improving the educational outcomes of school students.

2. Digital transformation of school education, including vocational education and training, by:

- 2.1. Upgrading the cloud environment in the education system, introduction of specialized software solutions for analysis and evaluation of educational outcomes, using computer modeling, algorithms and artificial intelligence;
- 2.2. The digitalisation of the open-access learning content;
- 2.3. The creation of learning content and the development of digital skills for all educational actors — pupils, teaching staff, students and teachers in higher education institutions;
- 2.4. The introduction of digital technologies and the development of digital educational content and innovative approaches through the updating of education and training curricula, the use of ICT-based approaches and methodologies that encourage the modernisation of the learning process;
- 2.5. Enhancing the qualification of teachers to work with digital technologies for the introduction of digital forms of teaching in academic subjects and interactive courses and the introduction of innovative teaching methods;
- 2.6. Increasing the digital competence and skills of school students, including computer modeling, including digital platforms and cloud technologies for full use by teachers of different approaches to distance learning in an electronic environment;
- 2.7. Conducting training on new technologies and acquiring digital competences for teachers and school students, conducting information and training campaigns on the dangers of the internet, the negative impact of fake news and the development of social networking skills as a platform for self-expression and participation in decision-making processes;
- 2.8. Capacity building and support of educational institutions and participants in the educational process – teachers, school students and parents for conducting distance learning in an electronic environment.

Ensuring modern quality education inevitably requires the development, adaptation, implementation of digital educational content, as well as the introduction of innovative

approaches by updating curricula for education and training, using ICT-based approaches and methodologies that promote the modernization of the learning process, identifying and validating valuable digital educational resources, providing opportunities for blended learning, distance learning (both synchronous and asynchronous), use of augmented and virtual reality, and artificial intelligence for learning purposes. This is also related to the need of provision software or ICT equipment needed to develop and implement digital educational content and programmes.

The success of digitization of education and training is inconceivable without the development of the "human factor" – participants in the educational process will be encouraged to acquire and improve digital skills and the use of innovative teaching and learning methods, including by supporting and promoting the lifelong learning process. In this regard, the priority is the qualification of pedagogical staff and teachers in higher education to work with digital technologies for the introduction of digital forms of teaching in subjects and interactive courses and the introduction of innovative teaching methods, as well as the possibility of additional education, distance learning, networking and lifelong learning. Given the expected impact and the crisis with COVID-19, a systemic approach is needed, thus upgrading the project "Education for Tomorrow".

3. Supporting talented children and school students with outstanding skills, including:

- 3.1. Training in courses, academies, etc. of art and science and training camps for participation in national and international competitions organised by schools, personal development support centres, scientific and creative unions, foundations, associations and companies, sport clubs;
- 3.2. Support for participation in national and international competitions, Olympic games and science, culture and sport competitions;
- 3.3. Excellence awards;

4. Support for innovative curricula, innovative classrooms and innovative kindergartens and schools, including:

- 4.1. Encouraging educational innovations in pre-school and school education;
- 4.2. Innovative qualification of teachers and teacher cooperation;
- 4.3. Development and introduction of innovative activities in the organization and content of education in kindergartens and schools;
- 4.4. The introduction of innovative forms of governance, training and learning environment, the use of innovative teaching methods, the development of innovative learning content, curricula and educational plans;
- 4.5. Exchanges of innovation in education. The establishment of vocational training communities among teachers to further support the implementation and dissemination of good practice;
- 4.6. Creating a package of implementation methods and tools for tracking and multiplying good innovation practices to be disseminated at national and international level, including through partnerships between different schools;

- 4.7. Ensuring synergy and upgrading good practices and results, realized through implemented mobility under Erasmus+, through their introduction and multiplication at educational institution level;
- 4.8. Improving educational outcomes, motivation for learning, participation in school life and the development of creative thinking, different competences and emotional intelligence through innovative educational processes, teaching methods, school leadership and new learning strategies.

It is envisaged that the activities will upgrade the national programme "Innovation in Action", which supports the policy of building an innovative educational environment, which is related to creating conditions and support for developing a culture for creating and implementing innovations in all spheres of school life in all kindergartens and schools, incl. the creation of professional communities in and between schools, in which teachers from different fields of knowledge join forces and time to achieve common goals and multiply good innovation practices. To achieve this goal it is necessary to stimulate the establishment of links, exchanges and networks between innovative schools and kindergartens, as well as with other schools and kindergartens in the country that are ready to create and implement innovations, the availability of information platform and implementation of mobility for innovation and good practice.

5. Activities in support of the promotion of alternative access to the teaching profession, by attracting and ensuring the access of highly qualified human resources to the teaching profession – applicable to each group of activities above under Priority 2.

The activities will upgrade the results of the Motivated Teachers National Programme, which has been operating since 2019 and thanks to which about 150 people have already taken their way to the classrooms, as well as the project "New Way for New Talents in Teaching" (NEWTT) funded under Key Objective 3 (Support for innovative policies in the field of education) of Erasmus+. Between 2016 and 2019, the project attracted successful graduates, graduating students and professionals from various fields, with diverse academic and professional experience, who would not enter the teaching profession through traditional ways of teaching teachers. The main reasoning for entering the profession of the participants in the innovative training programme are the desire to work with children and youth and the sense of social responsibility. After the end of the two-year programme, which includes theoretical training and teaching in school, the participants in the innovative path to access to school in Bulgaria have more pedagogical knowledge than traditionally trained teachers from the control group. The schools have welcomed the new teachers. In their face, they recognized valuable support in tackling the growing challenges in the classroom and in the communities in which they work. An innovative pathway to accessing the profession has successfully helped schools meet the needs of the underprivileged communities in which they operate by giving them access to competent and committed teachers with a range of knowledge.

List of planned operations of strategic importance – Article 17(3)(d)(i):

Text field [2 000]

1. Introduction of the competence model, through modernization of the curricula and content, preparation of individual curricula and individual study programmes of school students with special educational needs and school students with outstanding talents and increasing the capacity of pedagogical professionals;

2. Digital transformation of school education, incl. vocational education and training;

It is envisaged that these operations of strategic importance will be implemented as long-term operations with a systemic effect, ensuring equal access to education throughout the country. These operations will provide for a specific evaluation and monitoring plan to allow for an impact assessment in the course of implementation and a flexible update mechanism will be established, depending on the results of the assessment and monitoring.

The main target groups – Article 17(3)(d)(iii):

Text field [1 000]

Children, school students, parents, teachers, pedagogical and other specialists and other staff.

Participants in the educational process, the Ministry of Education and Science and its secondary authorising officers, the Ministry of Culture, the Ministry of Youth and Sports, the institutions in the system of pre-school and school education, municipalities, non-governmental organizations.

2.3.1. *Specific objective IV²¹(Jobs and growth goal) or Area of support (EMFF) – repeated for each selected specific objective or area of support, for priorities other than technical assistance*

(iv) improving the quality, effectiveness and labour market relevance of education and training systems, to support acquisition of key competences including digital skills

2.3.1.1. Interventions of the Funds

Reference: Article 17(3)(d)(i)(iii)(iv)(v)(vi);

The related types of actions – Article 17(3)(d)(i):

Text field [8 000]

1. VET support activities targeting the system at national level, including:

1.1. Setting up and maintaining a system for updating the qualifications of teachers and lecturers in their field of study in higher education, as well as attracting young teachers and vocational trainers into the VET system. Develop the competence profiles of VET teachers and trainers.

1.2. Updating and modernizing the list of professions for vocational education and training and including in a single mechanism for developing and updating the state educational standards, curricula and programmes, in a single mechanism and using the capabilities of digital technologies to ensure compliance between them and those corresponding to the needs for certain professional knowledge and skills and key competencies in a real work environment and achieving a more complete compliance of the standards with the requirements of the profession, in partnership with the social partners.

1.3. Creating and launching the activity of Sectoral Skills Councils and introducing a sectoral approach in VET through:

– Development of "Sectoral Strategies for Skills" and "Sectoral Qualifications Frameworks" – Modernization of the state educational standards, curricula and programmes, incl. training content for vocational training, together with employers.

²¹ Except for a specific objective set out in Article 4(1)(c)(vii) of the ESF+ Regulation.

Modernisation of textbooks and teaching aids, including professional training in the various strands.

Development of flexible modular curricula and programmes of professions taking into account real labour market needs and a flexible adaptation mechanism, including part-time, evening and remote types of training together with employers.

Development of national examination programmes and the development of a credit system and the introduction of credits in vocational education and training, in the context of the European Credit Transfer System for Vocational Education and Training (ECVET).

– Establishment of a system for tracking graduates in vocational education and training based on new technologies.

– Establishment of a mechanism and tools for monitoring the progress and for measuring the learning outcomes and quality management of VET;

2. Activities in support of VET aimed at educational institutions, including:

2.1. Qualification of teaching professionals and teachers, including methodological educator and methodological teachers and teachers on professional preparation, for the use of modern digital technologies, skills for interactive teaching techniques, the new developments in the professions they teach, including studies of the training needs of VET teachers and trainers; Teacher training for creating digital content; Creation of virtual communities (e.g. on a sectoral basis) for the sharing of content, practices and resources.

2.2. Building/maintaining platforms and databases for establishing a link between the labor market and education for the implementation of internships and practices at regional, local and sectoral level;

2.3. Establishment of sectoral and regional information portals, including information on guidance for specific professions, labour market developments by sector and region, enterprise profiles, etc.;

2.4. Developing learning materials on professional preparation with digital and interactive learning content, open educational resources; e-learning, application management, content creation and sharing, literacy and culture for working with digital learning resources, the creation of virtual labs and classrooms with the use of artificial intelligence to contribute to the governance and individualisation of the learning process and preparation at home, according to the level and pace of learning of learners, including the development of tailored/individualised curricula.

2.5. Providing flexible pathways for reintegration into vocational education or training at school level;

2.6. Development, testing and implementation of partnership with social partners, employers and other stakeholders of information and communication strategies and programmes at territorial level, such as information exchanges, open days in enterprises and educational institutions of the VET system, increasing the attractiveness of VET and professional realization in key occupations and specialties for the economic sectors and for strengthening the link between school

students/parents–employers–school–local government, including: conducting sectoral regional studies of the incentives and barriers of young people for orientation to vocational education;

- 2.7. Incentives, including scholarships, and the provision of dormitories for the orientation of young people to priorities important for the economy;
- 2.8. Early career and professional orientation to occupations, typical for the tendencies in the development of the regional economy with the participation of representatives of the employers;
- 2.9. Establishment of a control mechanism for partnership "quality assessment" of VET and receiving feedback from employers;
- 2.10. Support the practical training of vocational secondary school students through additional practices in a real working environment.
- 2.11. Enhancing practical training and additional professional preparation in educational institutions by supporting educational training companies and the provision of specialised equipment and materials for VET;

With the implementation of the project "School Student Practices" under OPSESG in the period 2016–2018 a basis was created for improving the links between VET and business as 78 schools in partnership with over 250 companies have implemented activities under the project. The project activities have improved the practical skills of 8,350 school students, of which 2,510 in priority professions for the state, to operate in a real work environment with the support of over 2,000 mentors from companies in close connection with over 1,000 supervising teachers from schools, 1,861 partnerships with enterprises. There is an increased interest in certain areas of vocational education, as well as an increase in admission to vocational education during the implementation of the project. The results show the need to continue supporting school students' practical training in a real work environment.

3. Establishment of VET Centers of Excellence

- 3.1. Support for the introduction of scientific approaches and innovations in VET, for the promotion of continuing education and R&D orientation of school students, entrepreneurial skills of school students;
- 3.2. Providing skills that are in demand on the labor market in the perspective of lifelong learning – combining the provision of initial VET with continuing education for skills upgrading or retraining;
- 3.3. Creating partnerships between employers and education for: internships, practices, equipment sharing, staff and teacher exchanges between companies and VET centers of excellence;
- 3.4. Active involvement in the "Knowledge Triangles" in cooperation with universities, research centers and businesses, to provide a broad portfolio of skills needed to implement these strategies;
- 3.5. Creating innovative methodologies for teaching and learning based on digital technologies (for example, open online educational resources – massive open online courses (MOOC's), simulators, etc.);

- 3.6. Serious emphasis on the continuing professional development of teachers and lecturers (in terms of pedagogical and technical skills, inclusion of research projects through the platform for VET providers);
- 3.7. Development of project-oriented learning, which is based on an interdisciplinary approach and school students in different fields in VET solve real problems in work environment;
- 3.8. Provision of career guidance and validation services;
- 3.9. Providing business incubators for VET learners to develop entrepreneurial skills, to implement projects, as well as innovative hubs and technology centers with shared facilities and initiatives that encourage partnerships with local SMEs for research and development of products and services through the inclusion of learners in VET.

These centers aim to link vocational education and training with innovation systems as part of smart specialization strategies. The transformation of some of the existing vocational high schools into centers of excellence is the core of that idea. Thus vocational high schools may become high-tech training centers for the respective regions, creating conditions for interconnecting VET with the updated strategy for smart specialization and technology transfer and innovation. The operation will be implemented in synergy with the infrastructure measures for the modernization of the designated centers under the Recovery Instrument and the RDP.

4. Development of the dual training system, including:

- 4.1. Additional professional training, information campaigns, networking, development of a framework and methodology and training, training of teachers and mentors, preparation of training content adequate to current and future needs of the labor market, supply of specialized equipment, career guidance and trial internships; sharing experiences;

The planned activities will upgrade and further develop the support for the expansion of the dual training system, launched in 2020 with the implementation of the OPSESG project "Support for a dual training system", which is expected to end in 2023. One of the objectives of the support for the dual system is related to the improvement of the connection "student – school – parent – employer" and promotion of the dual system of education. Involving more employers requires activities to be implemented at least at the planning area level to reflect the specific needs of the local economy. This determines the need to implement the activities through the ITI approach.

5. Introduction of forms of dual education in applicable specialties in higher education, including:

- 5.1. Research of international experiences within the EU;
- 5.2. Survey of the attitudes of business and universities in the country for the introduction of a dual form of education in HE;
- 5.3. Preparation of methodologies, manuals, training materials, samples of agreements between higher education institutions and employers for conducting dual training in higher education with the participation of the social partners;

- 5.4. Preparation of normative documents for the introduction of dual training in higher education;
- 5.5. Organizing a unified network for career guidance, in accordance with the needs of the labor market and upgrading the system for monitoring graduates at national level.
- 5.6. Introduction of dual training in higher education and other forms of joint training (incubators, summer schools, career events, etc.) between HEIs and employers;
Training for teachers and mentors;

In 2019, the implementation of the EU-funded EDU–LAB project (under the Danube Cross–Border Cooperation Programme) was completed. The activities were aimed at improving the professional opportunities of young people in the Danube region. The main objective of the project is the development of capacity and the development of new approaches in education with the support of a dual form of education. EDU–LAB brings together partners from the higher education sector, business organizations and national public authorities. With the activities envisaged in the programme for introduction of dual education, the project activities will be upgraded and expanded.

6. Professional orientation of students through practices, including:

- 6.1. Implementation and development of systems for monitoring graduates, at higher education level and maintenance of graduates' clubs.
- 6.2. Supporting the professional orientation of students through career centers.
- 6.3. Providing enhanced practical training of students to acquire competencies and qualities sought in the labor market by providing student internships and practices based on assessment of career guidance of students in priority professional strands.
- 6.4. Encouraging innovation and entrepreneurship in higher education in the digital economy, supporting and stimulating the entrepreneurial activity of students and teachers, incl. support for startups of students and PhD students, including through the development and implementation of mentoring programmes with the participation of business representatives.

7. Training of students and PhD students, by involvement in research work:

- 7.1. Research and development of students' attitudes to engage in scientific work.
- 7.2. Improving the conditions for conducting research in higher education by students.
- 7.3. Organizing competitive sessions for research projects led by students and doctoral students.
- 7.4. Encouraging the scientific activity of students and PhD students by providing specializations in universities, research centers and organizations, enterprises and employers in the country and abroad, as well as scholarships for scientific achievements;

In 2019, the implementation of the project "Student Internships – Phase 1" under OPSESG was completed, which provided practical training to over 46 thousand students in a real work environment. In the course of the students' practical training, the academic mentors received feedback from the employers to what extent the students' academic preparation corresponds to the needs of the labor market and in which aspects improvement is needed.

Taking into account the positive impact of the project and in support of the efforts of the Ministry of Education and Science aimed at improving the quality of higher education and creating a sustainable connection with the labor market, in early 2020 the implementation of the project practical training was launched expecting to involve a total of 44 thousand students. Priority inclusion in practical training is envisaged by setting quotas for students studying in the fields of higher education Pedagogical Sciences, Natural Sciences, Mathematics and Informatics and Technical Sciences.

One of the significant effects of these projects is that better career guidance of students and more informed selection of staff by employers is achieved, which justifies the need to continue in the same direction.

Based on the experience of the mentioned projects under OPSESG and with regard to the condition to provide equal access to practical training to all students, the planned activities under the Education Programme will be implemented through a systemic approach.

8. Modernization of curricula, teaching methods and the learning process, by establishing the competence approach in priority professional areas, in partnership with business, in accordance with current and future needs of the labor market and by introducing and developing T-skills and development of creative and universal skills, internationalization and participation in international networks and resource sharing, including:

- 8.1. Establishing joint (between business and higher educational institutions) centers for assessment and validation of competencies for higher qualification occupations;
- 8.2. Developing the competence profiles of higher education institutions and tools to assess the relevance of curricula and curricula to skills needs in the labour market.
- 8.3. Development and deployment of competence-based training models for students in interaction between higher education institutions and business.
- 8.4. Establishing joint training courses, bachelor's and master's programmes between higher education institutions in Bulgaria, aimed at the development of key competences for lifelong learning, foreign language competence, civic and social competences, common digital competences and strengthening the interdisciplinary approach in the preparation of curricula, introduction of hybrid disciplines and specialties, which include teachers from different scientific fields and professional fields, use of common resources – teachers, training base, curriculum and issuance of general /double/joint diplomas;
- 8.5. Creating curricula in foreign language;
- 8.6. Creating conditions for the development of students, doctoral students and researchers in areas identified as priorities in national and European strategic documents by providing individual support from higher education institutions;
- 8.7. Expanding international cooperation and academic partnerships with foreign universities and participation in university networks. Establishing joint educational programmes between Bulgarian and foreign universities, as well as new forms of educational exchange within the framework of European cooperation and issuance of joint/double/joint diplomas. Improving the systems for recognition of credits

obtained in foreign universities and the mechanisms for facilitated recognition of diplomas;

- 8.8. Short-term mobility and internships in foreign universities of students and doctoral students studying in priority professional strands;
- 8.9. Introduction of innovative curricula and teaching methods and hybrid specialties, combining disciplines from two or more professional fields, which are carried out by two or more universities;
- 8.10. Implementation of joint programmes for continuing education between HEIs and employers for qualification and re-qualification as a main tool for adaptation to the changing requirements of the labor market and the dynamics of high-tech professions;
- 8.11. Development of joint doctoral programmes between universities, research organizations and employers in professional strands with identified needs by the labor market;
- 8.12. Support for the preparation and publication of textbooks, teaching aids, and monographs in foreign languages;
- 8.13. Attracting teachers from abroad in order to exchange experience and improve teaching skills in HEIs;
- 8.14. Attracting prominent business practitioners and government institutions and scientists in academic classes;
- 8.15. Introduction of new methods for assessing students' knowledge and skills not on the basis of reproduction of memorized content, but through skills for debate, conducting scientific experiments or theoretical modeling, solving real problems, digital creativity, presenting information to specialized and non-specialized audiences, as well as the ability to understand the nature of the problem/topic, including through various digital tools and the development of skills for self-regulation of learning.

1. Digital change in higher education

- 1.1. Extended introduction of digital education technologies and the creation of programmes with a purely digital content, in line with the trend towards the development of digital transformation and artificial intelligence;
- 1.2. Introduction of digital and software solutions for student assessment and review, for example through plagiarism testing software. Creating online libraries and digital resources that can be used at any time, incl. during classes;
- 1.3. Introduction of disciplines and practical training in new digital technologies such as artificial intelligence (AI), augmented reality (AR), virtual reality (VR), etc., as well as basic training to develop skills for algorithmic thinking and solving algorithmic problems;
- 1.4. Creation of programmes for distance e-learning, improvement and updating of the curricula and platforms for distance e-learning, digitalization of the educational content and creation of new interactive digital resources. Preparation of massive

open online courses (MOOCs) with open access by Bulgarian teachers, incl. in English;

1.5. Creation of joint platforms for distance e-learning, creation of new interactive digital resources;

1.6. Providing equipment and software enabling interactive and digital teaching.

In recent years, digitalisation has become a key tool for providing access to better quality higher education, for greater internationalization and for modernizing teaching methods in line with the attitudes and interests of the younger generations. Digitalization can address one of the most difficult problems of modern higher education, namely to provide quality education at lower costs, which are within the capabilities of a much larger number of students of different social backgrounds.

The activities under the Education Programme will upgrade and expand the support for higher education institutions to provide a quality digital environment, improve the skills of teachers to use ICT-based innovative educational technologies, internationalization and participation in networks, launched with the implementation of the project "Modernization of higher schools" under OPSESG.

List of planned operations of strategic importance – Article 17(3)(d)(i):

Text field [2 000]

Group of activities:

– VET support activities targeted at the system at national level; VET support activities targeted at educational institutions; Transition to dual education in higher education and Professional orientation of students through internships

will be carried out as strategic long-term operations, implemented at the central level with a plan and specific information and publicity, monitoring and evaluation measures.

The main target groups – Article 17(3)(d)(iii):

Text field [1 000]

Pupils, pedagogical specialists, teachers of professional training, coaches, parents, students, PhD students, postdoctoral students, young scientists, teachers in higher education;

Higher schools and scientific organizations, the Ministry of Education and Science and its secondary budget managers;

Employers, nationally representative organizations of employers and employees, municipalities, NGOs.

Specific territories targeted, including the planned use of territorial tools – Article 17(3)(d)(iv)

Text field [2 000]

Activities targeting the following groups of activities are planned:

— Development of the dual learning system;

The specific needs and operations at local and regional level will be identified in the Integrated Territorial Development Strategies (ITDS) of the NUTS Level 2 regions; approved by the

Regional Development Councils. The programme's actions under the ITI approach will be implemented on the basis of integrated concepts, which will be developed and implemented in partnership between different local stakeholders (municipalities, NGOs, education institutions, employers, etc.), with a view to maximising the impact on the territory. Each concept will include a set of interrelated and complementary projects/conceptual projects targeting a territory with common characteristics and/or development potential, incorporating the most appropriate combination of resources and measures to be used purposefully to achieve a specific objective or priority of the ITDS. In this way, the identified PE projects under the ITI concept will be coordinated with the projects under the other programs providing funding under the concept.

The interregional and transnational actions – Article 17(3)(d)(v):

Text field [2 000] NA

The planned use of financial instruments – Article – 17(3)(d)(vi)

Text field [1 000] The final decision of the MA for financing measures for support through financial instruments will be based on the results of the ex-ante assesment in accordance with Art. 52 of the draft CPR.

SO VI – Promoting lifelong learning, notably flexible upskilling and reskilling opportunities for all taking into account digital skills, better anticipating change and new skills requirements based on labour market needs, facilitating career transitions and promoting professional mobility

2.3.2.1. Interventions of the Funds

Reference: Article 17(3)(d)(i)(iii)(iv)(v)(vi);

The related types of actions – Article 17(3)(d)(i):

Text field [8 000]

1. Continuing education of the academic staff in higher schools and training of researchers, including:

- 1.1. Improving the digital skills of lecturers and scientists; Training of lecturers in information processing skills, visual literacy, problem solving and thinking at a higher level.
- 1.2. Increasing the readiness of the academic staff and the employees in the administration of HEIs to work in a multicultural and multilingual environment through qualification, incl. foreign language teaching and research skills.
- 1.3. Providing systemic technological training to help lecturers in higher education institutions in mastering basic and additional methods, techniques and technologies for teaching and research. Trainings of lecturers for development of moderation skills.
- 1.4. Improving the qualifications and skills of lecturers and academic staff in higher education to carry out research and to encourage students to engage in research.
- 1.5. Organizing interuniversity national and international conferences and seminars to present new teaching methods.
- 1.6. Professional development of lecturers, PhD students, postdoctoral students, postgraduates, researchers and scientists, through short-term specializations in the country and abroad, as well as participation in specialized international forums.
- 1.7. Stimulation of postdoctoral programmes for raising the qualification, which should be carried out in leading in scientific terms HEIs and research centers and organizations. Encouraging participation as lecturers in these programmes of business persons with a doctoral degree.

2.T. TECHNICAL ASSISTANCE PRIORITY

Reference: Reference: Article 17(3)(e); Article 29, Article 30, Article 31, Article 89 CPR;

Description of technical assistance under flat rate payments – Article 30

Text field [5 000]

For the successful implementation of the Technical Assistance (TA) in the period 2021 – 2027 will be used the accumulated experience and good practices and approaches in Programming, implementation, monitoring, control and evaluation during the 2014 – 2020 Programming period. The TA will support all actions of the MA of the PE on planning, implementation, monitoring, control and evaluation of the PE, necessary for the effective, efficient and appropriate implementation of the set goals and achievement of indicators.

The planned investments will provide adequate systems, a good working environment and motivated human resources by highly qualified employees, thus achieving quality management and control of software, and hence more efficient utilization of EU funds. Investments will also be supported by technical assistance from external sources and instruments, taking into account the positive effect of exchange of experience and other best practices. Through the implementation of the envisaged measures, better administrative management of the PE will be achieved, which in turn will reflect on the development of the policies supported by the programme.

To achieve the set objectives, adequate and timely actions will be implemented in the following main strands:

1. Support for improving the administrative capacity of the MA and providing external expertise related to the planning, management, implementation, monitoring, control and evaluation of PE, including:

- 1.1. Financing of remuneration costs, including additional remuneration for achieved results, for employees performing functions of planning, management, implementation, monitoring, evaluation, provision of information and publicity and control of PE, incl. the related insurance contributions and other surcharges due under the applicable national law;
- 1.2. Holding and participating in trainings, study visits, seminars, workshops, exchange of experience and best practices, etc. attendance and remote / online forms of the employees of the MA and other structures supporting the implementation of the PE, in order to ensure and maintain high levels of competence;
- 1.3. Supporting the capacity of the MA by providing additional expertise in the field of information technology, state aid, legal services, effective organization of work processes, simplification of rules and minimization of administrative burdens, services supporting the activities for the implementation of PE, etc.;
- 1.4. Collection, summarization and analysis of information and statistical data, preparation of reports and documents, conducting research and carrying out other activities aimed at supporting the implementation of the functions of the MA;
- 1.5. Providing the material base, technical equipment, information systems and software programmes, necessary for management of the PE;

- 1.6. Support for the activities for management and implementation of PE, including monitoring, control and risk assessment, measures to combat fraud, irregularities, measures preventing corruption;
- 1.7. Support for the evaluation and project selection processes (organization of evaluation committees, hiring external experts, etc.);
- 1.8. Providing external expertise, incl. preparation of expert reports, analyzes, studies, research and evaluations at programme and operation level related to PE management;
- 1.9. Logistical and technical support of the activity of the MA of PE;
- 1.10. Activities related to the completion of the Programming period 2014 – 2020, as well as the preparation of a programme for the next Programming period 2028 – 2034;
- 1.11. Other activities related to ensuring the implementation of the PE.

These measures are expected to achieve effective and efficient management of the PE in accordance with the principle of sound financial management, as well as with European and national legislation. The successful implementation of the MA is directly dependent on the qualification and motivation of the MA staff, so one of the key objectives of the Technical Assistance is to support the upgrading of the MA's expertise.

2. Support for improving the administrative capacity of beneficiaries and potential beneficiaries, including:

- 2.1. Organizing and ensuring participation in trainings, information days, round table discussions, practical seminars, workshops and other forms of raising awareness, knowledge and skills of beneficiaries (under PE and other EU programmes such as Horizon Europe and Erasmus+) and their partners as well as potential beneficiaries;
- 2.2. Strategic support for increasing the capacity of key beneficiaries and partners in system operations, such as support for organizing and participating in trainings for development, management and sustainability of PE projects, for sharing experience with other EU Member States, etc.: MES, incl. Regional Education Departments and its secondary budget managers, higher schools;

The funds from the technical assistance will be used to finance activities aimed at increasing the capacity of beneficiaries and potential beneficiaries to participate in the PE, both with a view to preparing quality project proposals and their successful implementation and reporting. The investments will support the capacity of key beneficiaries of the programme and their partners with a view to the preparation and successful implementation of the planned strategic operations under the PE.

3. Ensuring the functioning of the Monitoring Committee on PE, incl.

- 3.1. Logistical and technical support of the activity of the MA of the PE for organizing and conducting the meetings of the PE Monitoring Committee;
- 3.2. Trainings for the PE Monitoring Committee.

4. Support for publicity of the programme, including:

1. Implementation of the measures set in the Communication Plan of the PE and implementation of the requirements for transparency of the implementation of the funds and communication of the programmes set in the CPR;
2. Organization of public events; production and distribution of advertising and information materials; work with media; development and distribution of audio–visual formats; outdoor advertising; communication through social networks; communication with stakeholders; developing and conducting communication campaigns, acquiring licenses and copyrights, conducting sociological surveys, etc.;
3. Other activities related to the implementation of transparency and communication measures.

Activities will be carried out to increase the information awareness of the target groups and beneficiaries regarding the investments by the PE, as well as to increase the opportunities for dissemination of the achieved results and good practices.

These measures will ensure the promotion of the PE, transparency in its implementation, as well as wide awareness of the contribution of the ESF+; applications for funding under the programme will be encouraged.

1. Enabling conditions

Reference: Article 19(3)(h)

Table 12: Enabling conditions							
Enabling conditions	Fund	Specific objective (N/A to the EMFF)	Fulfilment of enabling condition	Criteria	Fulfilment of criteria	Reference to relevant documents	Justification
Thematic condition Strategic policy framework for education and training at all levels	ESF+		Partially completed.	There is a national or regional strategic framework for education and training policy, which includes: Criterion 1 Evidence-based systems for predicting and envisaging skills Criterion 1a Graduates monitoring mechanisms and services for quality and effective guidance for learners of all ages	Partially completed.	[500]	[1,000] By agreement between the Ministry of Education and Science and CEDEFOP (European Center for the Development of Vocational Training) a national review is being developed on the topic: "Management of the system for estimating skills and their compliance with the requirements of the labor market. A Skills Estimating Roadmap will be presented and integrated into the Education and Training Strategic Framework. For the period April 2018-March 2021, the Ministry of Education and Science is implementing E+ KA3 project for piloting a mechanism for monitoring VET graduates – in three areas. The outcomes may lie in a future mechanism for VET graduates monitoring. Analyzes of the connection of VET with the labor market in three regions have been prepared. The development of a methodology for VET graduates monitoring by an external contractor has been assigned.

							In the field of higher education, the main developed tool in Bulgaria, based on integrated data and containing data for tracking graduates, is the Rating System in Higher Education.
				Criterion 2 Measures to ensure equal access to, participation and graduation of quality, accessible, respectively, non-segregated and inclusive education and training, as well as the acquisition of key competencies at all levels, including higher education	Yes	Pre-school and School Education Act http://ll.mon.bg/uploaded_files/ZAKON_za_preducilisnoto_i_ucilisnoto_obrazovanie_EN.pdf CMD No. 100 of 08.06.2018 for the establishment and functioning of a Mechanism for joint work of the institutions for coverage and inclusion in the educational system of children and school students of compulsory pre-school and school age http://back2school.mon.bg/index.php Ordinance on inclusive education file:///C:/Users/m.ninova/Down	<p>The Pre-school and School Education Act brings forward the principle of prevention of learning difficulties and early assessment of their risk.</p> <p>In 2018, changes were made in the PSEA (SG, No 99 of 2017) regarding the mechanism for financing educational institutions. Additional criteria have been introduced to reduce the differences in funding and additional funding (for working with children and students from vulnerable groups, etc.) in order to ensure equal access to education. In September 2020, the Council of Ministers approved a draft ASA of PSEA. It shall regulate the compulsory pre-school education from the age of 4 and the support of the state for the payment of fees for the use of kindergartens, due by the parents. (http://www.strategy.bg/PublicConsultations/View.aspx?lang=bg-BG&Id=4993)</p> <p>The measures under the Mechanism have been expanded to include activities related to the prevention of dropouts. Since 2017, coverage teams have sent back to school and kindergarten or enrolled for the first time 51,460 children and school students. The proportion of non-covered school students aged 5 – 16 in the 2019/2020 academic year decreased almost twice compared to the previous 2018/2019 (from 8.47% to 4.73%). An opportunity has been created to share good practices in the implementation of the Mechanism by various institutions involved in the process.</p> <p>The competence approach for mastering key competencies and practical orientation in the training and its interconnection with the labor market has been introduced in the PSEA.</p> <p>The admission of school students is being restructured and gradually increasing in vocational education and in the professional fields and profiles related to mathematics, engineering, natural sciences and information technology.</p> <p>Strategic framework for the development of education and training in the Republic of Bulgaria 2021-2030 (draft): Priority</p>

						loads/nrdb_prio_bshavashto_izm_271219.pdf	<p>Area 1 "Effective and Sustainable Inclusion"; Priority Area 2 "Motivation for learning and comprehensive participation"; Priority Area 3 "Knowledge, skills, values, talents and potential"; Priority area 8 "Educational innovation".</p> <p>Strategy for development of higher education in the Republic of Bulgaria 2020-2030 (draft):</p> <p>Objective 1. Development of a sustainable mechanism for updating the existing and creating new curricula; Objective 2. Introduction of modern, flexible and effective forms of education; Objective 3. Improving the quality of higher education; Objective 5. Stimulating the participation of young teachers; Objective 7. Building an effective education–science–business connection;</p>
			<p>Criterion 3</p> <p>A coordination mechanism covering all levels of education and training, including higher education, and a clear division of responsibilities between the relevant national and/or regional authorities</p> <p>Criterion 4</p> <p>Mechanisms for monitoring, evaluating and reviewing the strategic policy framework</p>	Partially completed.		<p>One of the main components set out in the agreement on criterion 1 (agreement between the MES and CEDEFOP) is the definition of a system of indicators for measuring the results and achievements of educational policy and developing a methodology for monitoring educational policy and information management related to these objectives. The methodology will also include methods for calculating indicators and regularity of indicator development. In this regard, an Interinstitutional Mechanism for monitoring the implementation and development of impact assessment of educational policies will be adopted by an act of the Council of Ministers. It is planned the draft of the said Mechanism to be prepared by September 2020 and to be proposed for public discussion.</p> <p>Strategic framework for the development of education and training in the Republic of Bulgaria 2021-2030 (draft):</p> <p>Priority area 10 "Governance and connectivity"</p> <p>Strategy for development of higher education in the Republic of Bulgaria 2020-2030 (draft):</p> <p>Objective 8. Increasing the role of HEIs as an active factor for regional development; Objective 9. Improving the management of HEIs and the evaluation and accreditation</p>	

						system; Objective 10. Improving the structure and efficiency of higher education.
			Criterion 5 Measures targeted at low-qualified workers and low-qualified adults and those with socio-economic disadvantages and ways improving the skills	Partially completed.		The first draft of the National Advisory Document with mechanisms and measures for improving the skills of adults has been prepared in implementation of the Council Recommendation of 19.12.2016. The document is available at: http://lll.mon.bg/uploaded_files/Proekt1_konsultativen_dokument.pdf Strategic framework for the development of education and training in the Republic of Bulgaria 2021-2030 (draft): Priority Area 5 "Making lifelong learning a reality"
			Criterion 6 Measures supporting teachers, trainers and educators in appropriate teaching methods, assessment and validation of key skills	Yes	Ordinance No. 4 on rationing and remuneration of labor prom. SG, No. 34 of 2017, SG No. 7 of 24.01.2020 Ordinance No. 15 of 2019 on the status and professional development of teachers, principals and other pedagogical specialists (prom., SG, No. 61 of 2.08.2019 CMD No. 9, prom SG, No. 9/2020). file:///C:/Users/m.ninova/Downloads/PMS9_20	The implementation of the policy for sustainable increase of the incomes of the pedagogical professionals continues. In 2020, the amount of the minimum basic salary has been increased by about 65% compared to the beginning of the government's mandate (the relevant amendments have been made in Ordinance No. 4 on rationing and remuneration of labor prom. SG, No. 34 of 2017, SG No. 7 of 24.01.2020). 2. Ordinance No. 15 of 2019 on the status and professional development of teachers, principals and other pedagogical specialists has been adopted (prom., SG, No. 61 of 2.08.2019), creating conditions for increasing the authority and social status of pedagogical professionals, building a system for continuing qualification, for professional improvement and career development. 3. Policies related to teachers are also supported by adopted national education development programmes (http://pris.government.bg/prin/document_view.aspx?DocumentID=u1WkHlzh9oiPz2mXWkMFug==) and projects funded under OPSESG, such as the project "Qualification for the professional development of pedagogical professionals" 4. The state encourages the interest in these professional fields and specialties by determining more vacancies, with better funding and by granting scholarships (CMD No. 9, prom. SG,

						20_izm-norm-aktove_31012020.pdf	No. 9/2020). Exemption from fees for students in the field of "Pedagogy of teaching in..." is provided as an additional incentive to increase interest thereto. Strategic framework for the development of education and training in the Republic of Bulgaria 2021-2030 (draft): Priority area 6 "Motivated and creative teachers"
				Criterion 7 Measures promoting mobility of learners and staff and transnational cooperation between education and training providers, including through the recognition of learning outcomes and qualifications	Partially completed.		In 2018 and 2019, a total of 38 information events were held to clarify the opportunities for applying under the Erasmus+ programme and the European Solidarity Corps programme, administered by the Center for Human Resources Development as part of the work programme for the year and the invitation of organizations / institutions in the field of education and training. The Center is constantly updating its plans for holding information events based on the feedback received and the activity observed in the respective calls for applications for the various activities it administers. The information events are available at: http://hrdc.bg/%D1%81%D1%8A%D0%B1%D0%B8%D1%82%D0%B8%D1%8F/ Strategic framework for the development of education and training in the Republic of Bulgaria 2021-2030 (draft): Priority Area 4 "Carrier in the professions of the present and the future"; Priority area 8 "Educational innovation". Strategy for development of higher education in the Republic of Bulgaria 2020-2030 (draft): Objective 4. Internationalization of higher education and inclusion in international educational and scientific networks
Thematic condition National Roma Integration Strategy	ESF+	viii Promoting socio-economic integration of third country nationals and of marginalised communities such as the Roma		Measures accelerating Roma integration, preventing and eliminating segregation, taking into account gender equality and the situation of young Roma, and setting baseline indicators and measurable milestones and target values	No		Update and adoption of the National Roma Integration Strategy after 2020, including an Action Plan for the implementation of the strategy As a first step in the development of the new strategy, an analysis of the period 2012-2020 will be made. It will help highlighting the best practices and lessons learned and will serve as a basis for the development of a National Strategy for

								Roma Integration after 2020. The first element of the analyses from the period 2012-2020 has already been prepared by a team of the Bulgarian Academy of Sciences. Meetings were held with the team of analysts and the next steps were outlined. The organization of local meetings with the participation of regions of the country was discussed. Discussions have already been launched with relevant stakeholders, including political officials, on the new elements and the specific structure of the new strategic policy framework for Roma national inclusion.
				Mechanisms for monitoring, evaluation and review of Roma integration measures	Partially completed			<p>Provided monitoring and review of the implementation of the National Roma Integration Strategy through special functions of the monitoring, evaluation and control system</p> <p>A system for monitoring and control of the implementation of the National Strategy of the Republic of Bulgaria for Roma Integration 2012-2020 has been developed. The respective functionalities of the System have been developed and are fully operated. Data on the implementation of the 2018 action plan of the Strategy have already been collected. The information required for the new administrative monitoring report on the implementation of the National Roma Strategy is presented and summarized in the monitoring system.</p>
				Mechanisms for including Roma integration at regional and local level	Partially completed			<p>Updating regional strategies and municipal action plans in accordance with the objectives and priorities of the strategy.</p> <p>Updating of the regional strategies and municipal action plans will be done within the partnerships developed within the project under criterion 4.</p>
				Mechanisms ensuring that development, implementation, monitoring and review are carried out in close cooperation with Roma civil society and all	No			Development of the consultation and coordination process at national level through the National Council for Cooperation on the ethnic and integration issues and at local level through

				other stakeholders, including at regional and local level			<p>regional and municipal councils for cooperation on ethnic and integration issues and monitoring at local and regional level.</p> <p>A Grant Agreement has been signed between the National Council and the European Commission (DG Justice) for the implementation of the T.E.A.M. (Together wE Achieve More) project. The implementation of the project has started on 1 November 2019. Its objective is to support the active partnership between stakeholders in the implementation and monitoring of the National Strategy for Roma Integration by maintaining and developing the National Roma Platform as a process of dialogue, exchange of many stakeholders, participation and cooperation at all levels.</p>

<p><i>Text field [10 000]</i></p> <p>By Decision of the Council of Ministers No. 196 of 11 April 2019 <i>approving the analysis of the socio-economic development of Bulgaria 2007-2017 to define the national priorities for the period 2021-2027, a list of the policy objectives to be supported during the program period 2021-2027, and a list of programs and a leading institution for their development</i> an Indicative List of programmes and leading institutions for development of each programme for the programming period 2021-2027 was approved. In the Decision, the Ministry of Education and science has been designated as the lead institution for the "Operational Programme for Science and Education". By Decision No. 495 of the Council of Ministers of 21 July 2020 <i>amending and supplementing Decision No. 196 of the Council of Ministers of 11 April 2019</i>, the name of the "Operational Programme for Science and Education" was replaced by "Education Programme".</p> <p>Decree No. 142 of the Council of Ministers of 7 June 2019 <i>on the development of strategic and programming documents of the Republic of Bulgaria for management of European Union funds for the Programming period 2021 – 2027</i> (CMD No. 142/2019) states that thematic task forces are established for the development of the programmes financed by the funds for the Programming period 2021 – 2027, as in the document the conditions for drawing up thematic task forces, the tasks and basic procedures for the task forces are indicated.</p> <p>By Order No. RD09-1942 of 01.08.2019, as amended by Order No. RD09-1654 of 31.07.2020 the Minister of Education and Science assigned to the Executive Agency "Operational Programme "Science and Education for Smart Growth" (EA OPSESG) to organize the activities for the development of "Education Programme" for the 2021-2027 programming period, as well as the activities for the formation of the Thematic Working Group (TWG) for its development.</p> <p>Pursuant to the provisions of the CMD No. 142/2019 and in implementation of the above-mentioned order of the Minister of Education and Science, EA OPSESG formed a TWG for development of the Programme for the Programming period 2021–2027. As a Managing Authority of the Operational Programme "Science and Education for Smart Growth" 2014-2020</p>
--

EA OPSESG has used its experience acquired in the previous programming period in terms of involving the widest possible range of institutions, organizations and various stakeholders in the process of preparation of the Programme.

As regards the inclusion in the composition of non-profit legal entities acting for public benefit, which representatives to participate in the composition of the TWG, the procedure for selection of non-profit legal entities acting for public benefit stipulated in CMD No. 142/2019 was applied.

On 2 August 2019, EA OPSESG has launched a procedure for selection of non-profit legal entities acting for public benefit, which representatives are to participate in the composition of the TWG. The call was published on the websites of the Ministry of Education and Science (www.mon.bg), EXECUTIVE AGENCY SCIENCE AND EDUCATION FOR SMART GROWTH OPERATIONAL PROGRAMME (<https://opnoir.bg>) and the ESIF Single Information Portal (www.eufunds.bg). The call specified the criteria to be met by the applicant organizations, as well as the application deadlines and the required package of application documents.

The invited groups of non-profit legal entities acting for public benefit activities, which representatives to participate in the composition of the TWG were:

- Organizations working in the field of equality between men and women, anti-discrimination and equal opportunities;
- Organizations working in the field of social inclusion and integration of marginalized groups;
- Organizations working in the field of education, science and culture;
- Organizations working in the field of youth policies;
- Environmental organizations;
- Organizations of local action groups and local fisheries action groups to implement the Community-Led Local Development Approach.

During the procedure no representatives were elected for two of the groups, due to which a second procedure was held according to the requirements of item 11 of Annex No. 2 to Art. 9, para. 4 of CMD No. 142/2019 with regard to the groups of non-profit organizations acting for public benefit, for which no applications for participation in the election have been received or all persons who have submitted an application for participation in the election do not meet the requirements for the specific group (for a **group** of organizations working in the field of gender equality, non-discrimination and equal opportunities and for a group of organizations of local action groups and local fisheries action groups to implement the Community-Led Local Development Approach).

The call for the second procedure was published on 12.09.2019 on the websites of the Ministry of Education and Science (www.mon.bg), EXECUTIVE AGENCY SCIENCE AND EDUCATION FOR SMART GROWTH OPERATIONAL PROGRAMME (<https://opnoir.bg>) and the ESIF Single Information Portal (www.eufunds.bg). It reiterated the criteria to be met by the applicant organizations, as well as the application deadlines and the required package of application documents.

Subject to the provisions of the Council of Ministers Decree No. 142/2019 and after the first procedure for selection of non-profit legal entities for public benefit, which representatives to participate in the TWG, the nominal composition of the working group was determined by the Minister of Education and Science by Order No. RD09-2726 of 22.10.2019. After the

completion of the second procedure for selection of non-profit legal entities for public benefit and after the expressed interest in participating in the TWG by the State Agency for Road Safety, the order was amended and supplemented by Order No. RD 09-666 of March 26.03.2020.

The composition of the TWG for the preparation of the Programme for the 2021–2027 Programming period includes representatives of various departments and organizations:

- Ministry of Education and Science
- Executive Agency Science and Education for Smart Growth Operational Programme
- Administration of the Council of Ministers
- Ministry of Economy
- Ministry of Environment and Water
- Ministry of Transport, Information Technology and Communications
- Ministry of Regional Development and Public Works
- Ministry of Labor and Social Policy
- Social Assistance Agency
- Ministry of Interior
- Ministry of Foreign Affairs
- Ministry of Finance
- Ministry of Youth and Sports
- Ministry of Culture
- Ministry of Agriculture, Food and Forestry
- State Fund “Agriculture”
- 'Audit of EU Funds' Executive Agency
- Executive Agency "Certification Audit of EU Agricultural Funds"
- State Agency for Child Protection
- Agency for Persons with Disabilities
- State e-Government Agency
- National Council for Cooperation on Ethnic and Integration Issues
- National Agency for Vocational Education and Training
- National Evaluation and Accreditation Agency
- Assessment Center for Pre-school and School Education
- Center for Information Provision of Education
- Center for Educational Integration of Children and School Students from Ethnic Minorities
- National Center for Professional Development of Pedagogical Specialists
- National Information and Documentation Center
- Center for Human Resources Development
- National Statistical Institute
- Commission for Protection against Discrimination
- The six regional development councils at NUTS 2 level
- Confederation of Employers and Industrialists of Bulgaria
- Bulgarian Chamber of Commerce and Industry
- Bulgarian Industrial Capital Association
- Bulgarian Chamber of Commerce
- Union for Business Initiative

- Confederation of Independent Trade Unions in Bulgaria
- Confederation of Labor "Podkrepa"
- National Council for Integration of Persons with Disabilities
- National Association of Municipalities in the Republic of Bulgaria
- Bulgarian Academy of Sciences

- Fund of funds
- A group of organizations working in the field of social inclusion and integration of marginalized groups
- A group of organizations working in the field of ecology
- A group of organizations working in the field of education, science and culture
- A group of organizations working in the field of youth policies
- A group of organizations working in the field of gender equality, non-discrimination and equal opportunities
- Group of local action groups and local fisheries action groups to implement the "Community-Led Local Development" approach
- State Agency for Road Safety

According to the adopted internal rules for the activity of the TWG for the development of the Programme for the 2021–2027 Programming period, the TWG has the following functions:

- in charge for the preparation of the draft programme for the 2021–2027 Programming period;
- submits through the Minister of Education and Science the priorities of the respective programme for consideration by the Council for coordination in the management of the European Union funds;
- analyzes the priorities of the Republic of Bulgaria and the sectoral strategies in the field of the respective programme and, if necessary, prepares a motivated proposal to the Council for coordination in the management of the European Union funds for inclusion of additional priorities and measures in the programme;
- ensures that the programme complies with the principles of partnership and multilevel governance, as well as with applicable European and national legislation;
- monitors the implementation of the thematic enabling conditions in the relevant sectors and provides information on the progress in their implementation to the working group for the development of the Partnership Agreement for the period 2021–2027;
- monitors changes in European legislation, reflecting the necessary changes and updating the draft programme;
- submits, through the Minister of Education and Science, the draft programme for consideration by the Council for Coordination in the Management of EU Funds;
- performs other tasks assigned to it by the respective order for its establishment.

In carrying out its functions, the task force interacts with the thematic working groups for the development of other programmes and the task force for the development of the Partnership Agreement for the Programming period 2021–2027, regularly exchanging information on progress in developing the Partnership Agreement and programmes.

TWG reports its work to the Minister of Education and Science and to the Deputy Prime Minister under Art. 5, para. 1, item 2 of the Rules of Procedure of the Council of Ministers and of its administration.

The Minister of Education and Science is the one who is in charge for the quality and timely preparation of the draft programme.

The TWG performs its functions until the official approval of the programme by the European Commission.

The coordination, administrative and organizational–technical work related to the activities of the TWG is performed by the Secretariat of the thematic task force. The functions of the Secretariat are performed by the Programming, Monitoring and Evaluation Directorate of the EA OPSESG under the Minister of Education and Science.

According to the practice from the 2014–2020 Programming period, after the approval of the Programme, the MA will form a Programme Monitoring Committee, the main objective of which is to review all issues that affect the progress in the implementation of the programme in achieving its objectives. The composition of the Monitoring Committee includes a broad representation of all stakeholders, including representatives of ministries and Managing Authorities, regional development councils, the National Association of Municipalities in the Republic of Bulgaria, the National Statistical Institute, nationally representative organizations – of employers, of employees, of and for persons with disabilities, as well as representatives of the academic community and non–profit legal entities and departments responsible for the policies under which measures are funded by the programme. In its work, the Programme Monitoring Committee will be guided by internal rules of operation, including a detailed description of the objectives, tasks, composition, functions, procedures, coordination measures, etc. in full accordance with the provisions of the General Regulation for the period 2021 – 2027.

The MA of the programme will continue to be guided in all its actions by the partnership principles set out in COMMISSION DELEGATED REGULATION (EU) No. 240/2014 of 7 January 2014 on the European code of conduct on partnership in the framework of the European Structural and Investment Funds, which according to the General Regulation will continue to apply.

4. Communication and visibility:

Article 17(3)(i) CPR, Article 42(2) CPR

Text field [4 500]

The framework for communication and transparency of the PE for the Programming period 2021–2027 covers the responsibilities of the MA in terms of the visibility of the PE, the transparency and awareness of the target audiences about the implementation and the achieved results.

Objectives

- Promoting the role of the European Union and informing about the activities, implementation, results and good practices of the programme;
- Informing the potential beneficiaries about the possibilities for financing from the programme;

- Informing and supporting the beneficiaries in the implementation of projects under the programme.

Target audiences

- General public – citizens at national and regional level
- Beneficiaries of the programme
- Potential beneficiaries – eligible beneficiaries eligible for support under the Programme
- Non – profit legal entities
- Administration engaged in the management of EU funds in Bulgaria
- Mediators/disseminators of information

Communication channels

Communication channels and implementation activities The communication and transparency activities will be selected according to the specifics of the message, the characteristics of the target group or subgroup.

In order to ensure the effectiveness of communication in the planning and implementation of communication campaigns and activities, an integrated communication mix will be used, both as activities and forms, and as channels. The main communication channels that will be used include:

- Website of the Programme;
- Electronic Media;
- Print media;
- Online media and social networks and file sharing platforms;
- Direct communication (events, information days, seminars, trainings, etc.).

Monitoring and evaluation

The effectiveness of the communication and transparency activities under the PE will be assessed according to standardized criteria and indicators, including:

- measurement of achieved quantitative parameters of physical performance/progress;
- measuring effect/result, as well as lasting impact through sociological surveys.

5. Use of unit costs, lump sums, flat rates and financing not linked to costs

Reference: Articles 88 and 89 CPR

Table 14: Use of unit costs, lump sums, flat rates and financing not linked to costs

Indication of use of Articles 88 and 89: *	Priority No	Fund	Specific objective (Jobs and growth)
--	-------------	------	--------------------------------------

			goal) or area of support (EMFF)
Use of reimbursement of eligible expenditure based on unit costs, lump sums and flat rates under priority according to Article 88 CPR	Priority 1		V; VI; VIII
	Priority 2		IV
	Priority 3		IV; VI
Use of financing not linked to costs according to Article 89 CPR	Priority

	Priority		

* Full information will be provided according to the models annexed to the CPR.

APPENDICES

- Reimbursement of eligible expenditure based on unit costs, lump sums and flat rates (Article 88 CPR)
- Financing not linked to costs (Article 89 CPR)
- EMFF action plan for small-scale coastal fishing
- EMFF action plan for each outermost region

Appendix 1: Reimbursement of eligible expenditure from the Commission to the Member State based on unit costs, lump sums and flat rates

Template for submitting data for the consideration of the Commission

(Article 88)

Date of submitting the proposal	
Current version	

A. Summary of the main elements

Priority	Fund	Specific objective (Jobs and growth goal) or area of support (EMFF)	Category of region	Estimated proportion of the total financial allocation within the priority to which the SCO will be applied in % (estimate)	Type(s) of operation		Corresponding indicator name(s)		Unit of measurement for the indicator	Type of SCO (standard scale of unit costs, lump sums or flat rates)	Corresponding standard scales of unit costs, lump sums or flat rates (in national currency)
					Code	Description	Code	Description			

B. Details by type of operation (to be completed for every type of operation)

Did the managing authority receive support from an external company to set out the simplified costs below?

If so, please specify which external company: Yes/No – Name of external company

Types of operation:

1.1. Description of the operation type	
1.2 Priority /specific objective(s) concerned (Jobs and growth goal) or area of support (EMFF)	
1.3 Indicator name	
1.4 Unit of measurement for indicator	
1.5 Standard scale of unit cost, lump sum or flat rate	
1.6 Amount	
1.7 Categories of costs covered by unit cost, lump sum or flat rate	
1.8 Do these categories of costs cover all eligible expenditure for the operation? (Y/N)	
1.9 Adjustment(s) method	
11.10 ¹ Verification of the achievement of the unit of measurement - what document(s) will be used to verify the achievement of the unit of measurement? - describe what will be checked during management verifications (including on-the-spot), and by whom. - what arrangements to collect and store the data/documents described?	
1.11 Possible perverse incentives or problems caused by this	

¹ Several complementary indicators (for instance one output indicator and one result indicator) are possible for one type of operation. In these cases, fields 1.3 to 1.11 should be filled in for each indicator.

indicator, how they could be mitigated, and the estimated level of risk	
1.12 Total amount (national and EU) expected to be reimbursed	

C: Calculation of the standard scale of unit costs, lump sums or flat rates

1. Source of data used to calculate the standard scale of unit costs, lump sums or flat rates (who produced, collected and recorded the data; where the data are stored; cut-off dates; validation, etc.).

--

2. Please specify why the proposed method and calculation is relevant to the type of operation:

--

3. Please specify how the calculations were made, in particular including any assumptions made in terms of quality or quantities. Where relevant, statistical evidence and benchmarks should be used and attached to this annex in a format that is usable by the Commission.

--

4. Please explain how you have ensured that only eligible expenditure was included in the calculation of the standard scale of unit cost, lump sum or flat rate.

--

5. Assessment of the audit authority(ies) of the calculation methodology and amounts and the arrangements to ensure the verification, quality, collection and storage of data.

--

Appendix 2: Financing not linked to cost – N/A

Template for submitting data for the consideration of the Commission

(Article 89)

Date of submitting the proposal	
Current version	

A. Summary of the main elements

Priority	Fund	Specific objective (Jobs and growth goal) or area of support (EMFF)	Category of region	<i>The amount covered by the financing not linked to cost</i>	Type(s) of operation	Conditions to be fulfilled/results to be achieved	Corresponding indicator name(s)		Unit of measurement for the indicator
							Code	Description	
The overall amount covered									

B. Details by type of operation (to be completed for every type of operation)

Types of operation:

1.1. Description of the operation type			
1.2 Priority /specific objective(s) concerned (Jobs and growth goal) or area of support (EMFF)			
1.3 Conditions to be fulfilled or results to be achieved			
1.4 Deadline for fulfilment of conditions or results to be achieved			
1.5 Indicator definition for deliverables			
1.6 Unit of measurement for indicator for deliverables			
1.7 Intermediate deliverables (if applicable) triggering reimbursement by the Commission with schedule for reimbursements	Intermediate deliverables	Date	Amounts
1.8 Total amount (including EU and national funding)			
1.9 Adjustment(s) method			
1.10 Verification of the achievement of the result or condition (and where relevant, the intermediate deliverables) - describe what document(s) will be used to verify the achievement of the result or condition - describe what will be checked during management verifications (including on-the-spot), and by whom. - describe what are the arrangements to collect and store the data/documents			
1.11 Arrangements to ensure the audit trail Please list the body(ies) responsible for these arrangements.
